DECLARATION

I declare that this is my own work and this thesis does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my thesis/dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

Signature: …………………………………… Date: ……………………………

The above candidate has carried out research for the MSc Dissertation under my supervision.

Signature of the supervisor: …………………………………… Date ……………………………

(Dr. Sepani Senaratne)
ACKNOWLEDGEMENT

This Dissertation has become an end product with the support and encouragement of many unforgettable people.

Thanks are due first to my supervisor, Dr. Sepani Senaratne, Senior Lecturer, Department of Building Economics for her great insights, leadership, support, encouragement, assistance, sense of humor and thus guiding me in making this research into a satisfying reality.

My special thanks are also extended to Mr. Indunil Seneviratne Course Coordinator & Head, Department of Building Economics for his comments, suggestions and critical insights in preparation of this dissertation.

My thanks are also extended to Dr Yasangika Sandanayake Research coordinator for her instructions, guidance and motivation to complete this study in a fruitful manner.

It is also my duty to acknowledge the services rendered by the senior lectures and lectures of the department of Building Economics, university of Moratuwa during my academic period. My sincere thanks go to the officers of the Department of Building economics, Faculty of Architecture, University of Moratuwa for helping in various ways to clarify the things related to my academic works in time with excellent cooperation and guidance.

My immeasurable thanks are also extended to all other friends and individuals assisted me in numerous ways including the participants of the questionnaire survey to make this endeavour a success.

ABSTRACT

Although a number of studies of stress in occupational settings have been conducted over the past decades, there are relatively few studies relating to stress of construction project management. The present study examines to identify the critical stressors causing stress, to assess the level of stress and to explore the impact of stress on performance of construction project managers (CPMs). Primary data was collected through use of a written questionnaire distributed by postal mailing and hand delivered to 155 samples of CPMs who work in a variety of construction entities (sector wise) using stratified simple random sampling. 115 questionnaires were returned in a usable form giving an overall response rate of 74%.

An analysis of the data collection for this study was determined in three ways. As a first step Relative Important Indices and mean score were generated to identify the sources of stress. Besides, factor analysis has been conducted including reliability analysis to confirm the sources of stress. Next, Descriptive statistics of scoring mean and standard deviation were generated for required variables to assess the level of stress and then correlation calculation was generated to assess the impact of stress on performance of CPMs. Finally Chi Square tests were conducted to test the significance of these correlations.

Four kinds of stressors (task stressors, organizational stressors, physical stressors and personal stressors) and seven sources of stresses including work overload, poor role congruence, poor organizational structure, career development environment, poor work environment, work group cooperation and type A behavior of personality were identified among CPMs. Four types of stress were identified in this research: objective stress, subjective stress, burn out and physiological stress. From the analysis, low level of objective stress, moderate level of subjective stress, high level of burnout and moderate level of physiological stress were found among the CPMs. This study confirms the impacts of four types of stress on performance (task, interpersonal & organizational) of CPMs. Limitation and implication of these research findings were also discussed in this study. Finally it is recommended to hold stress management workshops for the CPMs to relax their stresses and employers are recommended to keep reviewing and monitoring the abilities of the CPMs and allocate the responsibilities and work load accordingly. Direction for further studies is also suggested.

Keywords: Stress, Stressor, Coping, Performance
