Thesis submitted in partial fulfillment of the requirement for the degree of  
Master of Science in Project Management

Department of Building Economics

University of Moratuwa  
Sri Lanka

December 2012

## DECLARATION

I declare that this is my own work and this thesis does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or Institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant the University of Moratuwa the non-exclusive right to reproduce and distribute my thesis, in whole or in part, in print, electronic or other medium. I retain the right to use this content in whole or part in future works.

## ACKNOWLEDGEMENT

This thesis would not have been possible without the assistance, support, and encouragement of many wonderful people to whom I wish to convey my sincere appreciation.

First and foremost, I am indebted to Senior Lecturer – H.S. Jayasena and Prof. R. Rameezdeen; my dissertation supervisors who gave me enormous guidance and support continuously throughout this process and it took me to my highest. My humble gratitude goes to them for all the support and guidance provided.

I would like to express my sincere thanks to Senior Lecturer, Dr. Sepani Senaratne and Head of the Department of Building Economics - Mr. Indunil Seneviratne who gave me their fruitful advice for the success of this thesis.

I am especially grateful to all those who gave their fullest support in providing me the data of newly erected buildings in the Colombo district.

Finally, I am indebted to my family members and colleagues for their spiritual and emotional reinforcement throughout the study.

## ABSTRACT

Construction waste is a Project Management problem occurring at site level. In the absence of guidelines, Project managers find it difficult to benchmark their site performance in waste management. On the other hand, how much waste a construction site would generate had been a question for local authorities in Colombo local authority limits. The volume of construction waste could be ascertained using the norm construction waste index at the stage of receipt of the new building applications by that particular local authority. The scarcity of dumping sites in Colombo Local Authority level is the issue behind this problem.

Project managers and municipal commissioners conducted a study to determine usable waste indices. Data was collected from fifty recently completed construction projects within the Colombo district. Gross floor area based waste index was calculated for each project and those indices were statistically analysed to find conclusions.

The study shows that the Colombo district local authorities should use the norm construction waste index of 0.114 in assessing the building applications for Construction of new buildings. However, necessary steps should be taken to influence and motivate builders (specifically their project managers) to reduce the waste at least to average levels. In addition, based on good track records of the builder (if available), they can deviate from this norm to the average level of 0.043. The construction waste index of 0.016 is an achievable target and any additional waste generated can be discriminated by way of acquiring an additional fee or taxes. Further, these recommendations are identified in order to support the efforts to make the building industry a better, greener and social responsible industry.

**Keywords:** *Construction Waste, Waste Index, Colombo Local Authority level*

## TABLE OF CONTENTS

	Page
Declaration of the candidate & Supervisor .....	i
Acknowledgement.....	ii
Abstract .....	iii
Table of contents .....	iv
List of figures .....	vi
List of tables .....	vii
List of abbreviations.....	viii
List of Appendices .....	ix
<b>CHAPTER ONE .....</b>	<b>1</b>
1.0 Introduction .....	1
1.1 Background .....	1
1.1.1 Construction waste at site (project level) .....	4
1.1.2 Construction and demolition waste at National Level .....	4
1.2 Significance of the study .....	5
1.3 The objectives of the study .....	6
1.4 Methodology .....	6
1.5 Limitations .....	7
1.6 Organization of the Thesis .....	7
<b>CHAPTER TWO .....</b>	<b>9</b>
2.0 Literature Survey .....	9
2.1 Management of Construction Projects .....	9
2.2 Definition of Construction Projects .....	9
2.3 Definition of Project Management.....	10
2.4 The Traditional Triple Constraint .....	11
2.5 Prediction of Waste Quantity .....	15
2.6 Project Management on the Problem of waste Management .....	15
2.7 Solid Waste Problem .....	16

2.8	Solid Waste .....	17
2.9	Construction & Demolition (C&D) Waste .....	17
2.10	Definition of construction waste .....	18
2.11	Sources of construction waste .....	19
2.12	Effects of construction waste .....	21
2.13	Construction waste management & Importance of waste minimization ...	23
2.14	Construction waste index .....	24
<b>CHAPTER THREE .....</b>		<b>25</b>
3.0	Methodology .....	25
3.1	Methodology of the study .....	25
3.1.1	Area selection .....	25
3.1.2	Data collection .....	25
3.1.2.1	Primary data .....	25
3.1.2.1.1	Observation .....	26
3.1.2.1.2	Interviews .....	26
3.1.2.2	Secondary data .....	26
3.2	Collected data .....	27
3.3	Findings .....	28
3.4	Method of Analysis .....	29
<b>CHAPTER FOUR .....</b>		<b>30</b>
4.0	Data Analysis .....	30
4.1	Introduction .....	30
4.2	The advantages of creating a norm for construction waste index .....	30
4.3	Quantitative Techniques used for data analysis .....	30
4.4	Analysis of data .....	32
4.4.1	Composition of the Sample .....	32
4.4.2	Setting a Range .....	33
4.5	Statistical Interpretation .....	36

<b>CHAPTER FIVE .....</b>	<b>37</b>
5.0 Conclusions & Recommendations .....	37
5.1 Conclusions .....	37
5.2 Recommendations.....	39
5.3 Further Studies.....	39
 <b>REFERENCE LIST .....</b>	 <b>40</b>
<b>APPENDICES .....</b>	<b>44</b>
