INTRODUCTION	xi
Topic Explanation	xi
Need of the Study	xii
Aims and Objectives	xiii
The Methodology	xiv
The Analysis	xv
Scope & Limitations	xv
Organisation of the Study	xvii
Chapter One: THE STREET	
1.1 The Street: An Introduction	02
1.2 The Street: A Definition	02
1.3 The Street: The Semantics	04
1.4 The Street: Its' History	05
1.4.1 The Traditional Street	08
1.4.2 The Medieval Street	09
1.4.3 The Renaissance Street	10
1.4.4 The Contemporary Street	11
1.5 The Street Functions	12
1.5.1 Structuring Functions in a City	12
1.5.1.1 Basic Configurations of Streets	14

1.5.2	Functions of The Street	15
1.5.2.1	Physical Functions	15
1.5.2.2	Social Functions	16
1.5.2.3	Psychological Functions	18
1.6	The Street: Definition of Space	18
1.6.1	Definition by Horizontal Elements	19
1.6.1.1	Base Plane	19
1.6.1.2	Overhead Plane	20
1.6.2	Definition by Vertical Elements	20
1.6.2.2	Linear Vertical Elements	21
1.6.2.3	Parallel Vertical Elements	21
1.7	The Street: Fundamental Characteristics	22
1.7.1	Sense of Direction	22
1.7.2	Sense of Enclosure	22
1.8	The Street: A collection of Places	24
1.9	The Summation	24

Chapter Two: PLACE

2.1	An Introduction to Place	27
2.2	Place: A Definition	27
2.3	Place: Its' History	32
2.4	The Contemporary Place	35
2.5	Academics on Place	26
2.6	Literature Review	38
2.6.1	Place: The Spirit	38
2.6.2	Place: The Sense	42
2.6.3	Place: The Essence	47
2.6.4	Place: The Pattern	52
2.6.5	The Setting	56

2.6.6	The Concluding Comments on Review	64
2.7	The Summation	66

Chapter Three: THE BASIS FOR THE STUDY

The street as A Collection of Places

3.1	An Introduction to the Basis	69
3.2	The Basis for Identification	70
	The Street as A Collection of Places	
3.3	Identification of the Basis	73
	3.1.1 The physical Characteristics of Place.	73
	3.1.2 The Social Characteristics of Place.	84
	3.1.3 The Psychological Characteristics of Place.	91
3.4	The Limitation for the Basis	94
3.5	Formulation of the Basis	96

Chapter Four: THE DILEMMA:

The Contemporary City & Urban Life

4.1	An Introduction	101
4.2	The Dilemma	101
4.3	The History of Streets in Sri Lanka	106
	4.3.1 The Traditional Street	107
	4.3.2 The Medieval Street	111
	4.3.3 The Renaissance Street	115
	4.3.4 The Contemporary Street	117
4.4	The Need of the Study	119
4.5	The Summation	120

Chapter Five: THE RESEARCH METHODOLOGY

5.1	An Introduction	123
5.2	The Basis for Selection of the streets	123
5.3	Selection of the Streets	125
5.4	The Research Methodology	127
5.4.1	Participant Observation	128
5.4.2	Behavior Mapping	130
5.4.3	Questionnaire	132
5.4.4	Forms of Data Collection	133
5.4.5	The Limitations	133
5.5	Analysis of Data	134
5.6	The Summation	139

Chapter Six: THE RESEARCH

6.1	Introduction	143
6.2	The Research	143
6.2.1	Kirulapona	143
6.2.2	Bambalapitiya	167
6.2.3	Pepiliyana to Boralesgamuwa	172

Concluding Remarks & Conclusions	193

Acknowledgement

I take this opportunity to convey my deepest gratitude to all whom helped me in preparation of this dissertation.

- Prof. N. De Silva, Head, Department of Architecture, University of Moratuwa, Sri Lanka for his assistance in the research.
- Archt. Dr. Ranjith Dayarathna, Senior Lecturer, Department of Architecture, University of Moratuwa for countless discussions, criticism, comments and guidance in carrying out this research 'placing' me on the path.
- Archt. Dr L.S.R. Perera, Senior Lecturer, Department of Architecture, University of Moratuwa, for his kind guidance when ever needed.
- The staff of Department of Architecture, University of Moratuwa for generous help.
- Archt. Mr. Ashley De Vos for the valuable discussion on history amid his busy schedule.
- Archt. Ms. Nisha Perera & Archt. R. Gunarathna for kind guidance and numerous help in the study.
- Archt. S. Dharmatilake for his kind assistance in accessing, the Department of Police in Sri Lanka.
- Brig. K.A.S. Perera for his uncountable assistance for possible arrangements in having the Defence Clearance to photograph the high security zones within Colombo.
- O.I.C. s' in Kirulapona, Bamabalapitiya, Kohuwala and Boralesgamuwa Police Stations for their great co-operation in photographing and carrying out the research in the streets concerned.
- Mr. S. Rathnamala and Mr. R. Marasinghe for valuable contributions on photographing the streets in the study.
- Mr. & Mrs. Abeysinghe for their valuable assistance in carrying out the research.
- For all the 'curious pedestrians', who were alert, who poke their nose in to what I was doing, for the endless questions on the research and also for their valuable contribution to the study on the selected streets.
- Thlini and my friends who have helped me.
- My dear brother for his kind and generous brotherhood in my life.
- My loving mother for her love, strength, courage and devotion for us for our success.

Preamble

“For nearly a century, the street has been under persistent attack from several directions: the designers of Siedlungen and Garden Cities, the CIAM modern masters, and local government and welfare architects of Anglo-Saxon/Scandinavian countries have all attempted to postulate forms of urban settlement in, which the street was deprived of its past function or analysed out of existence. (Rykwert, J. 1978: 15)

At the same time there has been a correlative attack by those followers of them in Asia, particularly referring to street as primarily a carrier of traffic. It is highly based on the strong impact of the vast changing technology both in building and transport, transforming the streets effecting on it.

In one way it has resulted the solids on both sides to stand free, marked out on the ground as independent systems. On the other way it has made the street space to consider as the transportation conduit. Hence this separation between the building system and the street system has become the main characteristic in the present Contemporary Street.

On another way the effect of globalisation through innovation of communication is not replacing the direct human interaction in the urban life. Hence the impacts of all the modern changes on our lives have slowly effected in alienation of us from streets as inhabitants. So far it is generating a wasted street space and is producing urban blight.

In spite of above the street is a 'social space' for us. We have a multiplicity of choice with vehicles, people and certainly with animals and birds. All these do work out well in our streets. Probably our lack of sensitivity, high degree of respectfulness, short sight in action might have effected our behaviour. Most importantly the tolerable nature of us stands above all.

The daily expectations of us on unique 'patterns of offers' on the street and the intact nature of us has helped to generate a cohesive community within our urban structure. The changing culture, values and beliefs, with significance are associated with the street, pressurising on our movements, thoughts, communication networks and on the natural and built environments.

At the same time it is contributing on negative attributes on streets with feeling of fear, of street culture, on the street, street crime, streetwalker, street safety basically being a social stress. This darker aspect of human nature and action is now creating a disappointment and a fear in use of streets enforcing us to withdraw from them.

Now it is becoming no longer the public urban space between buildings, which we used to have until recent past. This results in a progressive movement of this 'public urban space' in to the interior of the structures of solids on both sides. No longer it will take time to be considered the street as a secondary component within our urban structure.

Hence today streets are becoming less an integral part of our urban lives. Already it is just a 'utilitarian channel' or just another 'utilitarian thing' for us. The miss use of poverty and exploitation coupled with centuries of deprivation has affected our lives so far that we long to have 'a surreal urban life'. This is a part of the continuum within our economical and political factors. Correa (1985) expresses this in a broader sense referring to cities,

Electronic Theses & Dissertations
www.lib.mrt.ac.lk

But perhaps we are paying too much attention to the physical and economic aspects of a city-and not enough to its' mythical, metaphysical attributes. (Correa, C. 1985: 81)

It is true that it is easy to condemn it but this is the outcome of the natural human concerns. Hence it seem to be that we are moving further and further away from the need of the urban street as a 'public social entity' generating a cohesive community. The problem of generating the viable urban street lies beneath our own hands. This is the cruel dilemma we have faced today.

Introduction

Topic Explanation

In the centre of the dilemma we are facing at the moment in contemporary streets, moving out of it depends on our capacity to search and recognise the elemental facts within them. In doing so the numerous entrenched expressions streets possess give us the basic conceptions of its' importance in urban life. Basically it is the spatial and temporal context of the urban street within, which much complex events of physical, social and psychological factors of our urban lives occur.

The street is considered as the origin of settlements. Since then through out human civilisations they have acted as the 'principle place' of public contact and public passage. It is the 'principle place' for exchange of ideas, goods and services, for recreation, and of course for protest and celebrations. Like wise the streets provide 'range of places' for human interaction. Hence it can be regarded as 'a collection of essential places' providing spaces for numerous events of our lives to happen.

If the street to be considered as a collection of places the question arises, 'What is a 'place'? What do we really mean by place? What gives its' identity and its' aura? In answering the above, 'place' has become the centre of attraction in architecture. It has been a central issue receiving a great deal of attention in the recent past.

Various academics have defined it in many ways and at the same time it affect humans in their daily life in many ways at many levels. Some would refer it as a concrete locality while some refer to it as a mythical, religious and magical location. Nevertheless place has been given various interpretations. The most basic and the most important characteristics of them all is its' intrinsic capacity to transmit meaning.

It is place that has been always able to uplift the physical, social and psychological needs of the human life. Possessing its' own identity where ever they are placed, places provide boundaries, enclosures and therefore territories with the help of various other factors stimulating the human mind creating a sense of attachment to them. Finally allowing a meaning to be emerged.

Hence the essence of the argument relates to the street as a collection of places with human attachment to the places concerned giving meaning. Therefore the research is based on the question of How do humans relate to streets in terms of considering it as a collection of places?

The objective of the topic underlies the meaning that, design of urban streets is to recognise the nature and limits of the interaction of people with their physical environment. Therefore the study regards the street as the physical environment as a structurally integral part of the society. It suggests that streets provide arenas for human needs, their cultural systems, and their events to happen being mutually interdependent with it as the physical environment.

Need of the study

University of Moratuwa, Sri Lanka
Electronic Theses & Dissertations
www.lib.mrt.ac.lk

What ever the disappointments or fears we have on streets we do possess enough time to begin to evade them in order to generate a new form of 'urban street life'. Here probably the most crucial factor may be that architecture and urban design seem to be alienated from each other.

Nevertheless in recent times more academics, professionals or specialists have attempted in 'urbanity' in respect to their own fields. While planners work at a scale where the street is often looked at as the traffic channel, sociologists bury themselves only in to the social factors. Others have impinged on economical, political factors while interestingly philosopher's dream of 'anti-urban utopias'.

At the same time architects' also have begun to concentrate on urban issues. So far as architects we have often buried ourselves in individual building projects concerned with the order of the plan or concentrating on ideal forms, ignoring our responsibility to this 'urban public space'. Hence we are also responsible for the social responsibility of creating a worsened condition in urban life.

As Correa says (1985),

“In the context of the Third World, the architect must have the courage to face very disturbing issues. For what is your moral right to decide for ten thousand, for a hundred thousand, for two million people? But when what is the moral advantage in not acting, in merely watching passively the slow degradation of life around you?”
(Correa. 1985: 134)

At least now we should understand the actual role of our selves- our role within the 'urban context'. In building up the bridge between the people and the urban physical environment. Most probably study of this nature would be one of them.

Aims and Objectives

University of Moratuwa, Sri Lanka.
Electronic Theses & Dissertations
www.lib.mrt.ac.lk

The main objective of the study is to understand and establish the nature of The Street as A Collection of Places. The study aims to focus on the 'concept of place' 'on streets'. In doing so, the study attempts to formulate a detailed basis deriving prepositions in physical, social and psychological components to identify 'general places in streets'.

First various meanings and mechanism of 'places on streets' have been considered through studying both 'patterns of events' happening and experiences of people in the streets concerned. Considering the 'events' the study aims to explore different components in the street contributing to the 'patterns of events' and their intensities. These 'patterns of events' are also geared to provide the psychological components of the people coupled with their experiences.

Then the study attempts to grasp the 'places' and 'patterns of places' through 'patterns of events' happening in the streets. These 'patterns of places' are aimed to formulate a 'structure of places' within the streets concerned. These various 'patterns of places', which are identified forming the 'place structure' is geared to provide the 'place collection' within the streets in the research study.

Most importantly this research attempts to confront the issue in the most basic three linear configurations of streets within the context of Sri Lanka. The research might help to recognise the existing conditions, specifically concentrating on the basic elemental man-environmental relationship on the selected prototype 'urban streets'. Basically the manner in, which this relationship has helped 'our urban street' to come in to 'being as places' within our community.

The conclusion will provide **findings** of these 'patterns' and their 'collections' aimed on 'enabling potentially positive places' in the 'selected potential urban streets' in the context of Sri Lanka.

The Methodology

As previously stated the research is based on three selected basic configurations of streets within the Colombo Metropolitan Region. The streets are selected on the knowledge and understanding of the physical, social and psychological impact of the street user within them.

Electronic Theses & Dissertations
www.lib.mrt.ac.lk

The research is adopted based on certain derived concepts on man-environmental relationships done by several academics. This relationship is regarded as reflected in human behaviour within the concerned physical environments. Therefore the methodology adopted is primarily based on identifying human behaviour in the streets concerned.

Observation, specifically the participant observation is the primary method adopted in the study. The other, the behaviour mapping and questionnaires are regarded as supplementary methods. These are carried out in the research settings in identifying several key examinations. Still photographic documentation has provided further clarifications. In doing so several forms of data collection has been adopted.

The research deals with the intangible phenomenon of place as well as the practical situation on streets. **Hence this is an authentic, qualitative, practical and a systematic approach.** It gives specific information applied in different situations based on individual and personal observations on the selected streets. Therefore the researcher plays an important role in the study. The research is carried out as an exploratory and an understanding study, largely generated based on derived information and insight on the streets concerned.

The Analysis

The data collected in the research setting is analysed using a content analysis. They are mainly focused on generating answers for the derived questions from the studies carried out by other academics.

For better and easy reference it is recorded in a diagrammatic manner coupled with the summation of the collected information during the research. Both the analysis and the piled up summation can be referred according to their given identity.

Specifically the analysis provides a clear understanding on 'patterns of places' in organising the said 'structure of places' in deriving the research objective. **Finally the 'patterns' and 'collections' are identified aiming on 'potentially positive streets as collections of places' in the study.**

Scope and Limitations

University of Moratuwa, Sri Lanka
Electronic Theses & Dissertations
www.lib.mrt.ac.lk

A research study on 'urban streets' within any context is definitely extensive in its' capacity. Therefore a definite scope should be acquired for better and easy reference on urban studies of this nature.

Although urban streets and their different aspects have been studied extensively in the West at present we have not concentrated much on them within our contexts. It may be that still we have great potentials to begin adapt our urban streets to suit our needs. Although there are beginnings of 'little discussions' most of us are still not much aware of the urban issues we are likely to encounter in the near future.

At the same time, so far the 'concept of place' has been limited to the theoretical confrontations. Its' application on practical situations have been merely attempted specifically within our urban context. Therefore this research is an attempt to apply the theoretical orientation of the 'concept of place' in to a practical application in undiscovered man-environmental relationship in the selected urban streets in Sri Lanka.

At the same time this study is based on qualitative attributes of the street as a collection of places. Under the prevailing limited resources the study of this complex nature will not be able to grasp the aimed holistic nature of the place concept on the street. Therefore several aspects may have been left out in regard of the concentrated objective of the study.

The streets are selected on a certain basis within the Colombo Metropolitan Region. The application of this study should be limited to similar streets within this region. A similar application outside this region will be in need of another study, probably of this nature within that context.

Specifically the research is concentrated on the basic man-environmental relationship within the urban context concerning as 'a collection of places'. It does not intend to identify the character of the urban street concerning as one whole place.

The temporal component can be regarded as one of the most important aspects of studies on streets and on place. How all the 'patterns of events' and 'perceptions of the users' change with time and their effects on emerging 'patterns of places' in the street have not been considered. The limited time, the complexity of the analysis and the prevailing security reasons within the urban region have been effected in limiting the study in to certain extent.

Therefore observations at certain times and annual, seasonal components have been avoided. Time has been needed to note down the necessary on site information. Therefore the research has been carried out during certain pre-scheduled time limits at certain intervals. The study has considered people as an entity at certain times that do not need to specify. At the same time it has specifically emphasised and specified the variety when necessary. The derived patterns of the research will be the out comes within these limitations.

The study of this nature on the undiscovered relationship in our urban streets based on the place concept will probably be an insight in to other similar urban studies within our context. Hence it would be better to look in to this research as a first attempt, in discovering the man-environmental relationship at least on the few selected urban streets in Sri Lanka.

Organisation of the Study

It is assumed that this part would provide the reader a better and a clearer understanding of the research study allowing a directional thought on its' procedure. Therefore it is important to begin with the primary understanding on this dissertation.

The First Chapter speaks of The Street. It aims to explain different physical, social and psychological definitions attempting to understand the common urban street. Then the study looks in to its' semantics. These provide different angles on our daily urban space, the manner it has been looked and viewed at. Then you will move in to notion of street during pre historic man allowing evolution of the street to emerge. Here the traditional, medieval and renaissance streets have been discussed finally focusing on the present contemporary street. Later the chapter speaks about how the streets organise themselves allowing structuring functions to the city. After math on the different physical, social and psychological functions it allows to happen in every day life. Next the chapter focuses on space defining elements of the street space concentrating on its' fundamental characteristics. At last the street is assumed as 'A Collection of Places'.

Electronic Theses & Dissertations
www.lib.mrt.ac.lk

Therefore it is important to begin the Second Chapter with the primary understanding on the concept of place. At first it explains the varied definitions given to place in our every day world. How the places are identified, their basic characteristics are taken in to view. Then it brings us in to the view that place is also a very much part of the lives of the man being the central concept of being. Next you'll be moving in to one of the most important sections of the study. It analyses the 'place' in academic terms bringing an extensive literature survey. It brings us in to the light of how others have dealt with this concept in their own theoretical orientations. In the concluding comments the study derives an own theoretical interpretation on the concept arguing and criticising them in order to facilitate the research.

The Third chapter speaks on the basis of the study- The Street as A Collection of Places. First it aims to identify The Street as Places establishing prepositions on Physical, Social and Psychological Characteristics. This is highly based on the adopted questioning, and analysis of the theoretical orientations of other academics in the Second Chapter. This is geared to provide a general basis on identification of place. But the study is focused specifically on streets assuming that it may allow the reader better understanding of the basis in the study. This can be regarded as the core of this study, which allows the research to emerge.

Next the question arose why are we in need of understanding this phenomenon? The answer lies within the Fourth Chapter. It focuses the study on Contemporary Street within the context of Sri Lanka. This concentrates on the present dilemma we have faced in our Contemporary City and urban life. At next it explores the evolution of the street in Sri Lanka correlating the history of the World Street giving a precise understanding on how the street of Sri Lanka changed up today. At last the chapter attempts to bring us in to the light of the architects' role in The Dilemma of the Contemporary Street in Sri Lanka.

Now the study is focused within our context and is ready to allow the basis of the study to be impinged. Therefore the next task is the research. In doing so three streets have been selected on a certain basis within the Colombo Metropolitan Region. Therefore the Fourth Chapter concentrates you in to the method, which the research has been carried out. It also contains the manner the analysis has to be read allowing an easy reference on this research study.

The next Sixth Chapter is focused on the research in selected three streets. It contains the collection of data, the analysis of data and the still photographic documentation. Several Hypotheses have been derived in order to derive the 'place collection'. Chapter contains a summary of the analysis establishing the hypotheses at last. Place is an intangible phenomena. Hence a theoretical approach of this nature would not be successful if not understood in a practical situation. Therefore the research analyses the streets in to a depth and helps to derive the Collection of Places.

Conclusions are derived based on the understanding and the analysis of the research on the selected streets within the context of Sri Lanka.
