

**PERFORMANCE OF ROOF AND CEILING SYSTEMS IN
TROPICAL THERMAL ENVIRONMENT**

A Dissertation submitted to the
University of Moratuwa
As a partial fulfillment of the requirements
for the Degree of
Master of science in Architecture

ACKNOWLEDGEMENT	IV
LIST OF PLATE	V
LIST OF FIGURES	VI
LIST OF TABLE	VIII

CHAPTER ONE

Introduction	01
1.1. Why roof is important	02
1.2. Problems	03
1.3. Objectives	05
1.4. Limitation	05
1.5. Methodology	05

CHAPTER TWO

University of Moratuwa, Sri Lanka.
Electronic Theses & Dissertations
www.lib.mrt.ac.lk

Back ground study	07
2.1. Theoretical back ground	07
2.2. Comfort and building design	07
2.2.1 Concept of comfort	08
2.2.2 Thermal comfort and affecting factors	08
2.2.3 Principals in climate design for comfort in warm humid climate	12
2.2.4 Requirement for occupancy and comfort	13
2.2.5. Quality of comfort	14
2.2.6. Design for comfort	14
2.2.7. Thermal properties of roof and ceiling materials with related to thermal comfort	16
2.2.8. Relationship between traditional roofing materials in Sri Lanka and thermal comfort	16

2.3.	Roof as the most important climatic component	17
2.3.1.	Typology of roofs	17
2.3.2.	Variable features of roof forms.	29
2.3.3.	How unventilated / ventilated suspended ceiling effect of roof	34
2.3.3.1.	How unventilated suspended ceiling effect roof	35
2.3.3.2.	How ventilated suspended ceiling effect roof	35
2.3.4.	Thermal properties of roof elements	36
2.3.5.	Required thermal performance for roof	37
2.3.6.	Problem of roof with related to thermal performance	40
2.4.	Climate of Sri Lanka	41
2.4.1.	Introduction to climate	41
2.4.2.	Specific elements of climate	42
2.4.3.	Characteristic features of the climate of Sri Lanka	44
2.4.4.	Indoor climate	48
2.4.5.	Contribution of climate and site for performance roof system	49
2.4.6.	Climatic condition in Colombo	50

CHAPTER THREE

Methodology	57
3.1. Instruments and equipment	57
3.2. Process of research	61

CHAPTER FOUR

Results	65
---------	----

CHAPTER FIVE

Analysis	75
5.1. Thermal performance of ceiling materials under tile roof	75
5.2. Thermal performance of ceiling materials under Asbestos roof	75
5.3. Thermal performance of ceiling materials under tile on asbestos roof	76
5.4. Thermal performance of roof covers	77
5.5. Recommendation	78

CHAPTER SIX

6.1. Conclusion	78
6.2. Limitation	83
6.3. Direction for further study	84

BIBLIOGRAPHY	87
--------------	----

ACKNOWLEDGEMENTS

I would like to record my deepest gratitude to the following whose generous contribution in numerous way enable me to make this essay a reality.

I am extremely grateful to Dr. Emmanuel, Lecture , Department of Architecture , Faculty of Architecture , University of Moratuwa, who has been a constant source of inspiration to me in the task of working this dissertation. Unless his valuable criticisms and patient guidance, I would not have been able to bring out this dissertation in this form. So, I express my heart felt gratitude to him.

My sincere thanks to Dr. Ashoka Perera , Lecture , Faculty of Engineering for giving permission To use the experiment hut.

I gratefully acknowledge the assistance rendered by Mr. Chatura, Technical Assistance, Faculty of Architecture, University of Moratuwa.

Finally I am ever grateful to my dear parents and wife for their persistent encouragement and constant guidance.

LIST OF THE PLATES

1.	Plate 01	Rockey mountain Institute Colarado, One of the most energy efficient building in the world	15
2.	Plate 02	Design for climatic condition	15
3.	Plate 03	Experimental hut	50
4.	Plate 04	Data Logger	60
5.	Plate 05	The north wall is designed to assist in Cross ventilation. House in Indonesia	80
6.	Plate 06	This Hawaii residence need only a breez way with the translucent roof to provide natural air conditioning .	81
7.	Plate 07	 Missonary Guest house at Dares Salaam ,close to the equator. Broad eaves and white painted roof (tanzania)	82
8.	Plate 08	A semi buried house in catalunga, Spain, harmonize with its rocky site. Deep over hangs to the windows and keep the house Pleasantly cool in summer.	82
9.	Plate 09	Traditional Ramada Papago indian nation Arizona A classic Shlter for desert survival ,also Representative of indigenous North American South west construction combines shading Ventilation and insulated(earth covered)roof Design.	82
10.	Plate 10	Earth sheltered house ,New canan Earth covered roof provide roof garden.	83

LIST OF FIGUERS
