Thesis submitted in partial fulfillment of the requirements for the degree of Master of Business Administration in Information Technology

Department of Computer Science & Engineering

University of Moratuwa

Sri Lanka

December 2010
DECLARATION

I declare that this is my own work and this dissertation does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any University or other institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Signature: 16.02.12
Date:

I have supervised and accepted this thesis/dissertation for the award of the degree.

ABSTRACT

The Agile Software Development process is becoming more popular in the software industry and a lot of software development firms are adopting Agile in recent times. Having a motivated workforce benefit organizations in several ways as motivation affects project productivity, software quality and project's overall success.

According to current literature, there have not been any empirical researches done to see the impact of Agile Software Development Methodology on employee motivation in the Sri Lankan context. Therefore, this study performs an in depth analysis of the impact of Agile Software Development on employee motivation.

Based on existing literature, several dimensions were identified to measure the Agile process and employee motivation. Then a questionnaire was distributed and the interviewing method was used to gather data to capture the extent Agile is practiced in organizations and the motivation level of employees. Correlation analysis and regression analysis were done to analyze how several Agile practices each related to employee motivation. The results revealed that Common Software Engineering Best Practices Applicable to Agile, Scrum-based Project Management Practices, Agile Product Delivery Management Practices and People Management Practices have a strong positive relationship with employee motivation.

The study concludes with recommendations of best practices to follow when adopting Agile.

ACKNOWLEDGEMENT

I would like to take this opportunity to express my utmost gratitude for all those who helped in countless ways to make my thesis a success.

My supervisor Dr. Chandana Gamage for his unwavering support and care given from the start till the end. If it’s not for your patience and guidance this would not be completed. My initial supervisor Dr. Buddhinath Jayathilake for the encouragement and guidance given me at the initial stage of the research and all my lecturers who helped me in numerous ways.

Mr. Charles David of SLASSCOM who took time off his busy schedule to help me in providing necessary statistics.

My parents, sister and my husband Varuna for the help and support given to me throughout the thesis and for encouraging me when I needed the most and all my friends who helped me in numerous ways.
