Identification of a place or an environment is an important need for human existence. The unique identity of a place facilitates this need. The important attribute of identity of a place is the 'Character of place'. Character is a strong spatial quality, which differs from one place to another. So it is important to examine and identify strong characters for the creation of liveable and meaningful places.

Urban nodes are an important element of city form as well as city character. They are such places where intensified strong characters have become meaningless due to modern haphazard development.

One impotent reason for this is the present city planner and architects are single based and disregard the multidisciplinary approach. The other reason is lack of knowledge of notion of character of urban nodes and its relative determinants and disregarding that each node processes its own unique characters.

So examination and identification of strong and distinctive characters help to create liveable meaning full urban nodes.

I am deeply indebted and thankful to many inspiring individuals who helped me through out this study to make it a reality.

First and foremost to Mr. Madura Prematilaka (senior lecturer), my tutor who with his great patience and advice guided me with every detail of the study, providing me constant encouragement to fall into the correct tract of thinking etc

To the head the of department Prof. Nimal de Silva and sixth year masters Dr. Samitha Manawadu, and Mr.Gamini Weerasinghe (senior lecturer) for giving me valuable comments and guidance in numerous ways.

Also I like to convey my special thanks to Mr. Kapila de Silva, who helped me through e-mail (now out of the country), Mrs. Wasana Wijjesinghe, lecturer of department of planning, and Mr.Ravin Gunaratne senior lecturer and senior lecturer Mr. Christ de Saram and Mr. Vigitha Basnayaka for helping, encouraging and giving me valuable guidance from the beginning to the end.

To my loving friend Bernard who encouraged and supported me in numerous ways, and being with me to share my work problems.

To my parents specially my "Ammi" for providing me encouragement throughout my dissertation, and my "Thathi' who accompanying me in my field surveys and been a source of strength to me through out this course.

To my sisters specially, Dilrukshi for supporting and encouraging me in many ways, and Rajitha for her support and help for photographs.

To each and every one, whose names I have failed to mention here I say a big "thank you" for being there with me, sparing valuable time and being a source of strength to my effort in making this study a possibility.
