Abstract

Eyes can be treated as one of the most important parts of the human body. People are very much bothered when they encounter eye related health problems. National eye hospital is the prime national body which comes to one’s mind when it comes to an issue related to eyes in Sri Lanka. But, it is apparent that stakeholders of National eye hospital are not well benefited by existing manual management practices of the hospital which are unproductive. The existing manual system in hospital is not patient supportive since it leads to unnecessary time wasting of patients. Administrative staff of the hospital often suffers from with data related issues such as loss of data and data redundancy of clinical patients. Doctors find it difficult to obtain most critical and updated medical information of patients on timely manner. All those concerns have resulted in making an additional workload on people.

The prime objective of this research project is to overcome above issues by developing a web based Patient’s Record Management System which adds values to stakeholders of the hospital. This system has been developed on a web based platform using PHP and MySQL and Adobe Dreamweaver CS6 has been used in designing the system.

The system can facilitate administrative staff of the hospital with updated patient data managing and processing methods which are very safe, convenient and time saving. Furthermore, patient details can be seared faster. The system helps doctors become more productive as the system allows doctors to access all the necessary and updated information refer to patients.

The project has been centered on design and implementing of this state-of-the-art trilingual web based Patient’s Record Management System, which provides an integrated holistic view of patient data among doctors, nurses and other authorized personnel.
**Acknowledgement**

It is with pleasure that I express my gratitude to University of Moratuwa which provided me an opportunity to carry out a project which I believe will satisfy a keenly felt need to improve my skills in applying learnt subject knowledge on a practical context.

I offer my sincere appreciation and special thanks to Dr. Prasad Wimalarathne, whose heartfelt teaching, guidance, suggestions and constant inspiration I have received, ever since I became one of his students in M.Sc in ICT class few years ago.

I express my gratitude and special thanks to all of my university lectures who made me competent with necessary knowledge which is compulsorily required to perform this kind of a hard work.

I’m no less grateful to my friends for their various efforts taken to help me in executing this project.

I must acknowledge my debt to my family members who lent me their hands giving me freedom and space of mind to fulfil my effort.

    2.3.8 Lanka Hospitals – Colombo ..........................................09
  2.4 Drawbacks and Weakness of the Existing System ...............09
  2.5 Advantages of Proposed System ........................................10
  2.6 Summary ........................................................................12
CHAPTER 3: Requirement Analysis

3.1 Introduction
3.2 Feasibility Study
   3.2.1 Technical feasibility
   3.2.2 Economical Feasibility
   3.2.3 Operational Feasibility
3.3 Requirements for the Patient’s Records Management System
   3.3.1 Non Functional Requirements
   3.3.2 Functional Requirements
   3.3.3 Requirements Gathering Method
3.4 System Requirements
3.5 User Requirements
3.6 Requirement Analysis – Summary

CHAPTER 4: Design

4.1 Introduction
4.2 Proposed System
4.3 System Architecture
4.4 UML Diagram
   4.4.1 Use Case Diagram
   4.4.2 Activity Diagram
   4.4.3 Class Diagram
   4.4.4 Sequence Diagram
4.5 Interfaces Design of PRMS
4.6 Design - Summer

CHAPTER 5: Implementation

5.1 Introduction
5.2 Implementation environment
5.3 Software Used
   5.3.1 Database
   5.3.2 Development Tools
   5.3.3 Dreamweaver
