ANALYSIS OF POWER QUALITY ISSUES DUE TO THE PROPOSED SOLAR POWER PLANTS IN HAMBANTOTA

Mahadurage Dhammika Ratnasiri

(119137G)

University of Moratuwa, Sri Lanka. Electronic Theses & Dissertations ubmitted in partial fulfillment of the requirements for the degree of WWW.ID.mrt.ac.lk Master of Science

Department of Electrical Engineering

University of Moratuwa Sri Lanka

December 2014

DECLARATION

"I declare that this is my own work and this dissertation does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books)".

Signature of the candidate

ABSTRACT

Solar power plants, despite their high initial investment are fast spreading in Asian countries owing to the availability of higher solar radiation throughout the day time. In Sri Lanka, two grid connected small scale solar power plants of 737 kW, 500 kW are already in operation located in Baruthankanda, Hambantota.

Three private developers have made proposals for another 30 MW solar plants, (each 10 MW) near the existing plants which would be directly connected to 33kV Bus at Hambantota GSS. However, unpredictable variations in the source of energy and power electronic converters of such a large solar power plant can create a significant impact on the existing power system in power quality point of view.

This thesis describes the details of a study carried out on the probable impacts on power quality at the GSS due to random fluctuation of solar radiation level for different systemdesign options of the proposed 30 MW plant. Standards IEEE 519-1992 and IEEE 1547-

2003 were used in the power quality check-op atuwa, Sri Lanka.

Electronic Theses & Dissertations www.lib.mrt.ac.lk

ACKNOWLEDGEMENT

First, I pay my sincere gratitude to Prof. J.P. Karunadasa who encouraged and guided me to conduct this investigation and on preparation of final dissertation.

I extend my sincere gratitude to Prof. M. P. Dias, Head of the Department of Electrical Engineering and all the lecturers and visiting lecturers of the Department of Electrical Engineering for the support extended during the study period.

I would like to thank Dr. Sugathapala, Director General (SEA), Mr. Nadeera, and Mr. Athula from sustainable energy authority who gave me the extreme support and opportunity to gather required information & data of the existing solar power plants.

I also thank to Mr. L. D. J. Fernando, DGM (P&D)-DD4, Mr. R. S. Wimalendra, CE (P&D)-DD4 who encouraged me and provided required resources to carry out this study.

University of Moratuwa, Sri Lanka. The support given by the decenical staff attached to isolar power plants at Baruthankanda, Hambantota and the developers of proposed power plants was remarkable.

I would like to take this opportunity to extend my sincere thanks to Mr. Chintaka Kumara Area Engineer (Hambantota), Mr. Lakshitha Wisumperuma, Electrical Engineer (Meter Lab)-DD4, Ms. Charitha Dissanayakage, EE (Maint.)-Hambantota, Ms. N.R. Ramasinghe, Electrical Engineer (Planning) –SP, Mr. Hettige, ES (Hambantota), Mr. Buddhika, ES (Hambantota) and all the colleagues of Ceylon Electricity Board who gave their co-operation to conduct my investigation work successfully.
