DECLARATION OF THE CANDIDATE & SUPERVISORS

“I declare that this is my own work and this thesis/dissertation does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my thesis/dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

ACKNOWLEDGEMENTS

It is with the deepest sense of gratitude, I acknowledge the tremendous encouragement, guidance and support extended to me by my supervisors Dr. W.A.D.S Rodrigo and Dr. K.T.M.U. Hemapala.

My sincere gratitude and thanks are also extended to all lectures of the Department of Electrical Engineering, University of Moratuwa for providing all the necessary facilities and guidance for all our academic activities.

I specially would like to appreciate for Ceylon Electricity Board for technical and financial support during this work. In addition, I would like to extend my sincere thanks to Chief Engineer Mr. S.H. Walpita.

I would like to appreciate my friends Mr. Waruna Geekiyanage, Mr. Chinthaka Ranawaka and Mr. Chirantha Jayasingha for the support provided in numerous ways throughout this period.

University of Moratuwa, Sri Lanka.

I also would like to thank all personnel who gave their ideas, support and encouragement.

Finally, I owe my gratitude to my father, mother and my loving Harshani Anurada and her family for their endless support and encouragement and without them I would not have come this far.

D.M.D.K. Dissanayaka

ABSTRACT

The term “Distribution Automation” generally refers to a distribution network switching subsystem devices equipped with the advanced technologies dedicated for purposes such as, ease of real time monitoring and controlling, reliability improvement management, integrating of distribution network and electricity market operation. Improving the reliability of electric power delivered to the end users is one of the main targets of employing distribution automation. Therefore, developing autonomous fault isolation and power restoration system for LV/MV distribution can be attractive reliability enhancement solution for the electric utilities.

Electrical utility industries are not focusing on automating Low Voltage (LV) distribution system due to complexity of the LV distribution network feeders. However, there is a room available for automation if an algorithm could be developed for autonomous fault isolation and power restoration. Development of a comprehensive algorithm opens up a new pathway for LV distribution.

 **University of Moratuwa, Sri Lanka.**
Electronic Theses & Dissertations
www.lib.mrt.ac.lk

Electrical distribution system network consists in large numbers of Remote Switching Subsystem Devices (RSSD) and these devices communicate in different protocol. These devices can be monitored and controlled remotely by linking with Supervisory Control and Data Acquisition (SCADA) system. However, investing on a fully fledged SCADA is not so economical for a small scale distribution utility. As a solution; scalable distribution automation will enable small scale distribution utilities to enter into distribution automation with optimal capital investment. Hence, developing a scalable SCADA is the solution for smaller distribution automation.

Results of this thesis are, a proto type LV distribution system has been developed to demonstrate the algorithm for autonomous fault isolation and power restoration system. Also has been implemented open platform SCADA system in view of acquiring multi-protocol remote switching subsystem devices.

Key words Distribution automation, Fault management activities, Fault isolation and power restoration, SCADA system, Protocol, Algorithm

TABLE OF CONTENTS

| | |
|---|-----|
| Declaration of the candidate & Supervisor | i |
| Acknowledgements | ii |
| Abstract | iii |
| Table of content | iv |
| List of Figures | vii |
| List of Tables | ix |
| List of abbreviations | x |

Chapter 1

| | | |
|-----|--|----|
| 1. | Introduction | 1 |
| 1.1 | Background | 1 |
| 1.2 | Introduction to Distribution Automation System | 2 |
| 1.3 | Importance of introducing Scalable SCADA | 3 |
| 1.4 | Literature Review | 4 |
| 1.5 | Identification of the Problem | 8 |
| 1.6 | Motivation | 10 |
| 1.7 | Objective of the Study | 10 |
| 1.8 | Contribution | 11 |
| 1.9 | Organization of the thesis | 11 |

Chapter 2

| | | |
|-------|---|----|
| 2. | LV Feeder Automation | 12 |
| 2.1 | Case Study: Time duration for fault management activities for Manual operated LV distribution network | 12 |
| 2.2 | Fault Management Activities in LV Feeder | 15 |
| 2.3 | LV Feeder Automation for Fault Management Activities | 17 |
| 2.3.1 | Feeder Automation | 19 |
| 2.3.2 | Proposed architecture for LV feeder automaton | 20 |
| 2.4 | Algorithm to LV Feeder Automation for Fault Management Activities | 23 |

Chapter 3

| | | |
|--------|---|----|
| 3. | MV SCADA system | 36 |
| 3.1 | Remote Switching Subsystem Devices | 38 |
| 3.2 | Proprietary protocols, open standards & Interoperability | 37 |
| 3.3 | Communication protocols available in Remote Switching Subsystem Devices | 37 |
| 3.3.1 | IEC 870-5-101 | 38 |
| 3.3.2 | DNP3 | 39 |
| 3.4 | Proposed multi - protocol Device Integration method | 40 |
| 3.5 | Communication media and technology | 41 |
| 3.6 | Communication media options | 41 |
| 3.6.1 | Twisted pair & Coaxial cables | 42 |
| 3.6.2 | Fiber Optic Cable | 42 |
| 3.6.3 | Radio link | 42 |
| 3.6.4 | Satellite link | 43 |
| 3.6.5 | Cellular (GPRS/3G) | 43 |
| 3.7 | Proposed Communication Media | 44 |
| 3.8 | Proposed communication architecture | 44 |
| 3.9 | Software package to developed SCADA | 47 |
| 3.10 | Key area of the Software package | 48 |
| 3.10.1 | Cost | 49 |
| 3.10.2 | Scalability | 49 |
| 3.10.3 | Security | 49 |
| 3.10.4 | Supported operating systems | 50 |
| 3.10.5 | Software architecture | 50 |
| 3.10.6 | Alarm handling. trending, data logging & reporting | 50 |
| 3.11 | Proposed Software package to developed SCADA | 50 |
| 3.12 | Developed Open Platform scalable MV SCADA system for integrating Remote Switching Subsystem Devices | 51 |

Chapter 4

| | | |
|-------|--|----|
| 4. | Financial feasibility for implementing open platform MV SCADA system | 53 |
| 4.1 | Project Cost Estimation | 53 |
| 4.1.1 | Capital cost | 53 |
| 4.1.2 | Operation & maintenance (O&M) cost | 54 |
| 4.2 | Benefits due to MV distribution automation | 55 |
| 4.2.1 | Reduction in outage Duration | 55 |
| 4.2.2 | Reduction in Manpower due to reduction in Crew travel time | 59 |
| 4.2.3 | Cost Benefit Analysis | 59 |

Chapter 5

| | | |
|-----|---|----|
| 5. | Research implementation | 60 |
| 5.1 | Implement a prototype autonomous LV Fault Isolation and Power Restoration together with Algorithm | 60 |
| 5.2 | Developing of open platform SCADA system with view of acquiring multi protocol Remote Switching Subsystems devices in Western Province South II of Ceylon Electricity Board | 64 |

Chapter 6

| | | |
|----|-------------------------------|----|
| 6. | Conclusion and Recommendation | 69 |
|----|-------------------------------|----|
