DECLARATION

I declare that this is my own work and this thesis do not incorporate without acknowledgment any material previously submitted for a Degree or a Diploma in any other university or institute of higher learning and to the best of my knowledge and belief, it does not contain any material previously published or written by any other person except where the acknowledgement is made in the text.

Also, I hereby grant the University of Moratuwa the non-exclusive right to reproduce and distribute my thesis, in whole or part in print, electronic or other medium. I retain the right to use this content in whole or part in future work (such as articles or books).

ABSTRACT

This study advances the knowledge in the field of research based innovations, in terms of prerequisites, specific to construction management context. Previously, the enhanced role of academic research in realising innovations through various reciprocals among universities, regulatory bodies, and industries was presented via Triple Helix Model (THM). Successively, the model has been explored to a great extent concerning many economic sectors. In parallel, developing knowledge based construction economies has become a mainstream theory in response to the lack of research activities within the construction organisations. Consequently, a paradigm-shift in the field of built environment research has been called over the last three decades. Yet, construction management indicates weak signs of research-based innovative development, confirming non-presence of the critical requirements of THM operation. However, no study so far has investigated on such requirements, creating a knowledge gap in explaining the inability of academic research fostering construction management innovations. Hence, this research aimed to investigate the Critical Success Factors (CSFs) of merging academic research with industry development requirements to cultivate an innovative construction management practice.

Accordingly, a compressive literature review uncovered theoretical explanations on research problem, forming the conceptual framework for the study. Refining the framework, a field study was conducted, combining inductive and deductive approaches informed by a pragmatist philosophical stance. Research objectives posed, four (04) Research Questions (RQs) with explanatory and exploratory purposes, and therefore, were answered through a mixed method. The perspectives of academia and construction industry of Sri Lanka were initially obtained through surveys. Academic census comprised 49 units and industry survey obtained the views of organisations and individuals separately with a 510 unit stratified sample. The findings of the surveys were inductively explored in front of critical cases from industry, and academia through case studies and expert opinions. Quantitative data were analysed statistically, whilst content analysis was performed with qualitative data. The findings were validated externally through opinions of three (03) high-profile experts, each engaged in all three (03) disciplines, academic, industry, and industry regulation.

While each RQ were answered in detail, overall, the findings confirmed the significance of academic research in cultivating an innovative management practice. Yet, the study revealed poor knowledge dissemination and utilisation in the context. Due to poor industry orientation of academic research, and construction industry operating as a Red Ocean, with inherited characteristics of price based competition, leads to a lack of research collaborations. In bridging the gap, the ultimately developed Model of CSFs for Research Driven Innovations (MRI) for construction management' reveals the CSFs of creating knowledge, consensus, and innovation spaces, with reference to actionable stakeholders. MRI defines the role of academia, regulatory bodies, and construction industry as novelty producers, legislative controllers, and wealth generators, respectively. The paired interactions among the three (03) contenders generate the knowledge infrastructure and political economy for the creation of the consensus space. The consensus space urges establishment of a Knowledge Brokering Hub (KBH) to administer strategic research partnerships between the academia and the industry. Therefore, given that, the knowledge space and consensus spaces are created, an academic research righteously initiated inside the innovation space, executed properly, and disseminated strategically, has the potential to foster innovations in construction management.

Key words: Academic Research; Construction Management Practice; CSFs; Innovation; Research Knowledge Dissemination and Utilisation.

DEDICATION

To my family

in return of departed time, and unconditional love...

University of Moratuwa, Sri Lanka.

ACKNOWLEDGEMENTS

Firstly, I would like to express my sincere gratitude to my supervisors, Dr. Yasangika Sandanayake, Dr. Sepani Senaratne, and Dr. Nirodha Fernando for the continuous guidance on my PhD study and related research publication, for their patience, motivation, and immense knowledge.

Besides my supervisors, I would like to thank the rest of my thesis progress review committee; Prof. Melvin Lees and Mr. H.D. Chandrasena, for their insightful comments, and encouragement, which incited me to strengthen my research from various perspectives.

My sincere thanks also goes to the Dean of Faculty of Architecture, the Head of Department of Building Economics, the Director of the Postgraduate Studies Division, and the Postgraduate Research Coordinator of the Department of Building Economics, and to respective staff and to the University of Moratuwa, who provided me with the institutional guidance, research facilities and encouragement. Without their precious support, it would not be possible to conduct this research.

I thank all the academic and industry professionals, who cooperated professionally in providing data as; survey respondents, case study interviewees, and experts, for their time and contribution to knowledge. Without their passionate participation and input, the data collection could not have been successfully conducted.

Also, I thank my research colleagues for stimulating discussions and encouragements we shared.

Last but not the least; I would like to thank my family for supporting me spiritually, in writing this thesis, and throughout the time, tolerating all the hard times created with my demanding schedules.

LIST OF FIGURES	XI
LIST OF ABBREVIATIONS	XIII
LIST OF APPENDICES	XVI
CHAPTER 1 – RESEARCH BACKGROUND.....	1
1.1 Introduction.....	1
1.2 Research Problem.....	6
1.3 Research Aim.....	9
1.4 Objectives of the Research.....	9
1.5 Research Questions.....	9
1.6 Research Design.....	10
1.7 Chapter Breakdown	11
1.8 Summary	13
CHAPTER 2 – LITERATURE REVIEW.....	14
2.1 Introduction	14

2.2	Significance of Academic Research in Cultivating an Innovative Construction Management Practice	14
2.2.1	Significance of higher education institutions in leading innovations ...	14
2.2.2	Research significance in innovative development as per Triple Helix Model	19
2.2.3	Academic research in construction management.....	23
2.2.4	Significance of re-shaping academic research in fostering management innovations in the construction industry	25
2.3	The Necessity of an Innovative Construction Management Practice for the Construction Industry Development	28
2.3.1	Correlations of innovation and development.....	28
2.3.2	Innovation for construction industry development.....	31
2.3.3	Consequences of the construction sector's Red Ocean symptoms and the importance of a Blue Ocean Strategy.....	33
2.4	Barriers for Merging Academic Research and Industry Development Requirements	36
2.4.1	Internal barriers for the academia	37
2.4.2	External barriers for the academia	38
2.4.3	Internal barriers for the Industry	40
2.4.4	External barriers for the Industry.....	43
2.5	Merging Academic Research and Industry Development Requirements	49
2.5.1	Dynamics of merging academic research and industry development requirements	49
2.5.2	Reshaping academic research to create a merge.....	52
2.5.3	Research knowledge dissemination process	53
2.5.4	Research knowledge dissemination mechanisms	56
2.5.5	Establishing research knowledge disseminating strategy for the construction industry.....	66
2.6	Conceptual Framework.....	72
2.7	Summary	75
CHAPTER 3 – RESEARCH METHODOLOGY		76
3.1	Introduction	76
3.2	Research Philosophy.....	76
3.3	Research approaches	79

3.4	Research Design	80
3.4.1	Purpose of a research	80
3.4.2	Research strategies	81
3.4.3	Research methods	84
3.4.4	Time horizons	85
