Dissertation submitted in partial fulfillment of the requirements for the  
Degree Master of Science in Electrical Installations

Department of Electrical Engineering

University of Moratuwa  
Sri Lanka

April 2016

## DECLARATION

I declare that this is my own work and this dissertation does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

## ABSTRACT

Long term energy sector planning is essential for a country to acquire sustainable development in all its social, economic and environmental dimensions. Further it will ensure the energy supply security of the country. Energy supply side needs to deal with technical, economic and environmental assessments of all energy supply options such as natural resources, energy imports, energy exports, etc. Also the energy supply side should follow policy directives of the government and should take all other related constraints in to account. Similarly the demand side too has to deal with the assessment of future energy needs of various consumption sectors, policy directives, etc.

Sri Lanka being a country scant of fossil fuels mainly depends on imports of petroleum and coal. Even though coal is used for electricity generation only, petroleum products are being used for variety of applications. Further, at the moment Sri Lanka does not deal with Natural Gas (NG) to fulfill its energy needs. However, potential NG fields have been found in Sri Lanka during the recent past. Therefore analyzing the viability of using NG is a timely requirement.

The software MESSAGE was used to model the energy chains associated with Petroleum, Coal and NG. The model was validated by comparing it with results of LTGEP of CEB and results of the initial natural gas utilization road map.

Under results, modernization of the existing refinery, introducing NG to the energy sector, and introducing electric vehicles have become economically viable options in the long run. Further, coal has become the most economical option for electricity generation. In addition, construction of a urea plant has become more economical than importing urea.

This model can be used in the planning stages of introducing a new technology, new energy source, or any other major change in the energy sector.

Key words: Long Term Energy Planning, Energy chain modeling, Least Cost, Technical, Economical.

## ACKNOWLEDGEMENT

Foremost, I pay my sincere gratitude to Dr. K.T.M. Udayanga Hemapala and Mr. Kanchana Siriwardena who encouraged and guided me to conduct this research and on perpetration of final dissertation.

I extend my sincere gratitude to Dr. Nalin Wickramarachchi, Head of the Department of Electrical Engineering and all the lectures and visiting lectures of the Department of Electrical Engineering for the support extended during the study period.

Further, I Extend my sincere gratitude to Mr. Damitha Kumarasinghe (Director General), Mr. Gamini Herath (Deputy Director General), Mr. Chamath Goonawardena (Director - Regulatory Affairs) and Mr. Palitha Sirimal (Director - Human Resources) of Public Utilities Commission of Sri Lanka (PUCSL) for supporting me during the study period.

I would like to take this opportunity to extend my sincere thanks to following experts who gave their support to conduct my work. Mr. Raja Amaratunga (Consultant - petroleum sector expert of PUCSL), Mr. EM Piyasena (Petroleum sector expert), Mr. NRR Jayasekara (Refinery Manager of Ceylon Petroleum Corporation), Ms. AS Premakanthi (Department of Economic and Scheduling of Ceylon Petroleum Corporation) and Mr. Lathika Attanayake (Electrical Engineer of Ceylon Electricity Board).

My thanks extend to International Atomic Energy Agency for providing the software MESSAGE.

It is a great pleasure to remember the kind co-operation extended by the colleagues in the post graduate program and my friends.

Further, I would like to thank my parents, my sister and my wife Moditha who helped me to continue the studies during the entire MSc program.

## TABLE OF CONTENTS

DECLARATION.....	i
ABSTRACT .....	ii
ACKNOWLEDGEMENT .....	iii
TABLE OF CONTENTS .....	iv
LIST OF FIGURES .....	vii
LIST OF TABLES.....	ix
LIST OF ABBREVIATIONS .....	xi
1 INTRODUCTION.....	1
1.1 Background .....	1
1.2 Problem statement/justification .....	2
1.3 Motivation.....	2
1.4 Objectives of the study.....	2
1.5 Methodology .....	3
1.6 Contributions.....	4
1.7 Organization.....	5
2 LITERATURE REVIEW.....	6
2.1 General Information.....	6
2.2 Energy Planning Software currently used in Sri Lanka.....	7
2.3 Overview for MESSAGE .....	8
2.4 Nature of Results of a MESSAGE Model .....	11
2.5 Importance of Environmental Factors in Energy Planning .....	12
2.6 Electric Vehicles .....	13
3 MESSAGE MODEL OF SRI LANKAN ENERGY SYSTEM .....	15
3.1 Present Situation of Sri Lanka’s Energy Sector.....	15
3.2 Natural Gas – An Option for Future Energy Needs of Sri Lanka.....	16
3.3 Selection of Energy Networks to the Model.....	18
4 BUILDING THE ENERGY SUPPLY NETWORKS – ENERGY LEVELS.....	19
4.1 Primary energy level .....	19

4.2	Secondary energy Level.....	19
4.3	Final energy level.....	20
5	<b>BUILDING THE ENERGY SUPPLY NETWORKS – DEMAND FORECAST</b> .....	22
5.1	Demand Forecast – Industrial Sector.....	22
5.2	Demand Forecast – Transport Sector.....	25
5.3	Demand Forecast – Household and Commercial Sectors.....	29
5.4	Demand Forecast - Electricity .....	31
5.5	Demand Forecast - Urea .....	33
6	<b>BUILDING THE ENERGY SUPPLY NETWORKS – TECHNOLOGIES</b> .....	35
6.1	Technologies – Existing Refinery.....	36
6.2	Technologies – Sapugaskanda Oil Refinery Expansion and Modernization (SOREM) .....	38
6.3	Technologies – Existing Thermal power Plants.....	41
6.4	Technologies – Candidate Power Plants.....	43
6.5	Technologies – Urea Plant.....	44
6.6	Technologies – NG Distribution Network.....	45
6.7	Technologies – Maximum NG production from Indigenous Resources.....	45
7	<b>BUILDING THE ENERGY SUPPLY NETWORKS – COST OF FUELS</b> .....	46
7.1	Cost of Fuels – Crude Oil .....	46
7.2	Cost of Fuels – Coal.....	47
7.3	Cost of Fuels – Gasoline, Kerosene and Diesel.....	47
7.4	Cost of Fuels – Fuel Oil and LPG.....	48
7.5	Cost of Fuels – Naphtha, LNG and Nuclear.....	49
7.6	Cost of Fuels – Indigenous NG.....	49
8	<b>BUILDING THE ENERGY SUPPLY NETWORKS – ENERGY FLOWS NETWORKS</b> .....	50
8.1	Energy Flows Networks – Natural Gas .....	50

8.2	Energy Flows Networks – Petroleum (Supply side).....	51
8.3	Energy Flows Networks – Petroleum (Demand side) .....	52
8.4	Energy Flows Networks – Coal .....	53
8.5	Energy Flows Networks – Nuclear .....	54
9	MESSAGE MODEL – RESULTS OF THE BASE CASE .....	55
9.1	Fuel Imports .....	55
9.2	Petroleum sector.....	56
9.3	Electricity Generation .....	57
9.4	NG Sector.....	60
9.5	Results in general .....	62
9.6	Transport Sector - Energy Share by Fuel.....	64
9.7	Industrial Sector - Energy Share by Fuel.....	66
9.8	Household and Commercial Sector - Energy Share by Fuel .....	68
10	SENSITIVITY ANALYSIS.....	70
10.1	Sensitivity Analysis – High Discount Rate Case.....	70
10.2	Sensitivity Analysis – Low Discount Rate Case .....	70
10.3	Sensitivity Analysis - High LNG and NG Price Case.....	71
10.4	Sensitivity Analysis – Low LNG and NG Price Case.....	73
10.5	Sensitivity Analysis – High Coal Price Case.....	74
10.6	Sensitivity Analysis – Low Coal Price Case .....	74
10.7	Sensitivity Analysis – High Petroleum Price Case.....	75
10.8	Sensitivity Analysis – Low Petroleum Price Case .....	75
11	LIMITATIONS OF THE MODEL.....	79
12	VALIDATION OF THE MODEL.....	80
13	DISCUSSION AND CONCLUSIONS .....	83

## LIST OF ABBREVIATIONS

Abbreviation	Description
Bcm	Billion cubic meters
BTU	British Thermal Unit
CEB	Ceylon Electricity Board
CPC	Ceylon Petroleum Corporation
GWh	Giga watt hour
IAEA	International Atomic Energy Agency
kcal	kilo calorie
kWh	kilo watt hour
LECO	Lanka Electricity Company (Pvt) Ltd.
LKR	Sri Lankan Rupee
LNG	Liquefied Natural Gas
LOLP	Loss of Load Probability
LPG	Liquefied Petroleum Gas
LTGEP	Long Term Generation Expansion Plan
Mcf	Million cubic feet
MoPRE	Ministry of Power and Renewable Energy
MJ	Mega joule
MW	Mega watt
NCRE	Non-Conventional Renewable Energy
NCV	Net Calorific Value
NG	Natural Gas
O&M	Operation and Maintenance
PJ	Peta Joule
PUCSL	Public Utilities Commission of Sri Lanka
scf	Standard cubic feet
SEA	Sustainable Energy Authority
SLSEA	Sri Lanka Sustainable Energy Authority
t	Tonne (1,000 kg)
USD	United States Dollar
