GPS-Android based Location Tracking System for Public Transportation (TrackIT)

R.R.Vithanage

149233B

Dissertation submitted to the Faculty of Information Technology, University of Moratuwa, Sri Lanka for the partial fulfillment of the requirements of the Master of Science in Information Technology.

May 2017

Declaration

I declare that this thesis is my own work and has not been submitted in any form for another degree or diploma at any university or other institution of tertiary education. Information derived from the published or unpublished work of others has been acknowledged in the text and a list of references is given.

Dedication

This thesis is dedicated to my parents, Mr. S.Vithanage and Mrs. G.Thambawita for their endless love, encouragement and support.

Acknowledgements

First and foremost I would like to offer my sincere gratitude to my research supervisor, senior lecturer Mr. B. H. Sudantha, for his guidance, supervision, encouragement and support throughout this study.

I would not know what research is and how to do research if the lecture series of thesis writing and research methodologies is not offered. So I would like to offer my sincere gratitude to the Prof. Asoka S. Karunananda for feeding the knowledge and guidance for doing researches in proper way.

I would also like to thank my lecturer S. Premaratne and all the lecturers of Faculty of Information Technology – University of Moratuwa, for their guidance and encouragement to get maximum use of knowledge and capabilities. Also I would like to mention the encouragement given by Mr. J.I. Pitiyage during the research.

I am grateful to the management and colleagues at Four Corners Lanka (Pvt) Ltd for their kind support and understanding during this work.

Finally I would like to extend my deepest gratitude to my parents and family, for their continuous support given in every possible way to make this project success.

Abstract

Public transportation has been considered as the main mode of transportation in Sri Lanka. General public can view static time table of public transportation but properly aligning the transportation with the correct time table is not happening due to various reasons such as traffic conditions, bad road condition and some technical or human resource unavailability. From the passenger's perspective, they do not have a method to find the actual location or availability of the bus or train causing to waste of time waiting on bus shelters and railway stations. Therefore some method for location tracking for transportation system is important to enable passengers to reduce their time wastage.

Many researches have been conducted on location tracking and monitoring in the world. With the spreading of information technology, over the past few years there have been some attempts to enhance the quality of public transportation with the application of information and communication technology. However still there is no proper mechanism to find real time location of a bus or train although there are some commercial tracking systems to track private vehicles by installing some costly hardware devices.

This research focused on utilizing commonly used technologies and infrastructure to implement the location tracking system for public transportation sector. The system consisting of a web application and a mobile application to enable location tracking. The web application is the core of the system which provides the interface for the general public to view the schedules and actual location of the bus or train. In addition to the location information, it predicts time of arrival/destination through analyzing previous data and current live data. The administration panel of the main web application enable management of all master data of the system.

With this system, it is expected to facilitate passengers to make better travelling decisions by providing required information for them. Also relevant authorities also can use system data to support decisions to enhance railway service and bus services. During the evaluation, it was shown that system was successful more than 70%.

Table of Contents

Chapter 1	1
Introduction	1
1.1 Prolegomena.....	1
1.2 Background and Motivation.....	1
1.3 Problem statement.....	2
1.4 Hypothesis	3
1.5 Objectives	3
1.6 Location Tracking - GPS Android based approach (TrackIT)	4
1.7 Structure of the Thesis	4
1.8 Summary	5
Chapter 2	6
Developments and Challenges in Location Tracking Systems.....	6
2.1 Introduction	6
2.2 Early Developments.....	6
2.3 Recent Developments	9
2.4 Currently Available Systems for General Public	10
2.5 Problem Definition	11
2.6 Summary	12
Chapter 3	14
Technology Adopted - TrackIT	14
3.1 Introduction	14
3.2 Technologies Available.....	14
3.3 Technology Stack.....	16
3.4 Summary	17
Chapter 4	18
An approach to TrackIT	18
4.1 Introduction	18

4.2 Hypothesis	18
4.3 Users.....	18
4.4 Input to the system	19
4.5 Output of the system.....	19
4.6 Process	20
4.7 Features	22
4.8 Summary	22
Chapter 5	24
Design of TrackIT	24
5.1 Introduction	24
5.2 Top Level Architecture	24
5.3 Main Web Application	25
5.4 Location Updater – Android Application	27
5.5 Public web interface	27
5.6 Public web service.....	28
5.7 Use case Diagrams of the system	28
5.8 Sequence Diagrams of TrackIT.....	28
5.9 Database Diagram of TrackIT	28
5.10 Summary	28
Chapter 6	29
Implementation of TrackIT.....	29
6.1 Introduction	29
6.2 Overall solution.....	29
6.3 Implementation plan for demonstration purpose.....	29
6.4 Software and Hardware used in TrackIT implementation	30
6.5 Main Web Application	31
6.6 Location Updater Mobile Application.....	40
6.7 Deployment View	42
6.8 Data Analysis.....	43
6.9 Summary	49
Chapter 7	50

Evaluation of TrackIT	50
7.1 Introduction	50
7.2 Evaluation Methodology	50
7.3 Evaluation Forms	51
7.4 Final Evaluation Results	51
7.5 Summary	54
Chapter 8	55
Conclusion and further work	55
8.1 Introduction	55
8.2 Overall conclusion	55
8.3 Objective-wise conclusions.....	55
8.4 Discussion	56
8.5 Limitations	58
8.6 Further Work.....	58
8.7 Summery.....	59
Appendixes.....	62
<i>Appendix A – Use Case Diagrams</i>	<i>62</i>
Use Case Diagrams of the TrackIT System	62
<i>Appendix B – Sequence Diagrams</i>	<i>66</i>
Sequence Diagrams of the system	66
<i>Appendix C – Database Diagrams</i>	<i>70</i>
Database Diagrams of the system	70
<i>Appendix D – User Module</i>	<i>73</i>
User Module Interfaces.....	73
<i>Appendix E – Track Module</i>	<i>77</i>
Bus Tracking Interfaces.....	77
<i>Appendix F – Train Tracking Module</i>	<i>80</i>
Train Tracking Interfaces	80
<i>Appendix G – Frontend Modules</i>	<i>84</i>
Frontend Interfaces.....	84
<i>Appendix H – Services</i>	<i>92</i>
Web service	92

<i>Appendix I – Mobile Application</i>	94
Development and Interfaces	94
<i>Appendix J – Evaluation</i>	97
Evaluation Forms	97
Evaluation Results.....	101
