Enhanced Service Oriented Software Framework for Embedded Android

P.K.L.S.Wijesekara

158780A

Dissertation submitted to the Faculty of Information Technology, University of
Moratuwa, Sri Lanka for the fulfillment of the requirements of Degree of Master of
Science in Information Technology.

May 2018

Declaration

I declare that this thesis is my own work and has not been submitted in any form for another degree or diploma at any university or other institution of tertiary education. Information derived from the published or unpublished work of others has been acknowledged in the text and a list of references is given.

Name of Student: Mr. P.K.L.S.Wijesekara

Signature of the Student: _____

Date:

Dedication

I would dedicate this thesis to my beloved family members who have never failed to give me a tremendous support, for giving all not only throughout my project but also throughout my life as well. As well they teach me that even the largest task can be accomplished if it is done one step at a time.

Acknowledgement

I wish to express my eternally grateful and gratitude to my project supervisor Mr. C.P. Wijeseriwardhana, Senior Lecturer, Faculty of Information Technology, University of Moratuwa who untiringly shared his knowledge, precious guidance, encouragement, advices and help given to complete the project successfully. Also, I thank to Prof A.S Karunananda who gave me guidance and advices to complete the project successfully.

I am also grateful to previous researchers who have contributed to the domain of embedded application developments, academic and non academic staff of Faculty of Information Technology, University of Moratuwa and also batch mates who have given me valuable feedbacks to improve the project.

Importantly I would like to thank my wife and my family members for the encouragement and undying support not only throughout my project but also throughout my life.

Finally, the support of University of Moratuwa is also sincerely acknowledged.

Abstract

In early days, embedded systems were limited to apply in scientific researches and to the devices which supported military requirements. Nevertheless the embedded systems are much more popular in consumer electronic, cooking, industrial, automotive, medical and commercial applications today. Current approaches to embedded system related software development, is having lack of rich frameworks with service orientation to provide freedom to access embedded system services. There for it is much more important to develop service oriented software framework that has enhanced features to operate embedded systems. Out of the embedded systems domain, the research has navigated to select embedded android and its Linux kernel as the preferred system due to its popularity and the availability of related resources. The approach to develop EmSOS was based on service orientation principles to deliver a software development framework. EmSOS is an acronym for - Enhanced **S**ervice **O**riented **S**oftware Framework for **E**mbodied Android

We hypothesize that issue of having lack of rich frameworks with service orientation to access embedded system services, can be addressed by introducing a rich framework. This hypothesis been inspired by the power of service oriented architecture.

Several categories of users can be identified for EmSOS. They are software architects, software engineers, System analysts, embedded system developers, and also researchers of embedded systems domain.

Table of Contents

1. Prolegomena	1
1.1 Prolegomena.....	1
1.2 Aim and objectives.....	2
1.3 Background and motivation	3
1.4 Problem in brief.....	3
1.5 Solution in brief.....	4
1.5.1 Users	4
1.5.2 Input	4
1.5.3 Output	4
1.5.4 Process	4
1.5.5 Technology	5
1.5.6 Features	5
1.6 System requirements	6
1.7 Structure of the Thesis.....	7
2 Current issues of embedded systems	8
2.1 Introduction	8
2.2 Gestation of software frameworks	10
2.3 Summary	11
3 A framework beyond android APIs	13
3.1 Introduction	13
3.2 What is a software framework	14
3.3 Service oriented architecture.....	14
3.4 Micro services	15
3.5 Summary	15
4 Service oriented software approach to embedded systems.....	16
4.1 Introduction	16
4.2 Hypothesis.....	16
4.3 Input	16

4.4	Output.....	16
4.5	Process.....	17
4.6	Summary	18
5	Design and Implementation	19
5.1	Introduction	19
5.2	Core service.....	20
5.3	Outcomes service	20
5.4	Configuration and linking service	21
5.5	Implementation.....	23
5.6	Core service.....	23
5.7	JSON outcomes service.....	25
5.8	Controller Logic	25
5.9	Configuration and linking service	27
5.10	Summary.....	27
6	Evaluation	28
6.1	Introduction	28
6.2	Functionality testing.....	28
6.3	Developer testing.....	30
6.4	Security test	33
6.5	Summary	33
7	Conclusion and future work.....	34
7.1	Introduction	34
7.2	Limitations	34
7.3	Future developments	34
7.4	Summary	35

List of Figures

Figure 2-1 Structure of an android system.....	10
Figure 2-2 Structure of an embedded Linux system.....	11
Figure 3-1 a sample diagram of a software framework	14
Figure 2.1 Finalized design of Core service module	18
Figure 5-1-Top level architecture of EmSOS	19
Figure 5-2 Component diagram of EmSOS Software framework.....	22
Figure 6-1 jUnit tests	31
Figure 4 Coverage chart with the development commits which has done with version controlling tool. (Git)	39
Figure 9 Test class of System test in test driven development	40
Figure 6 jUnit test results	41
Figure 11 HardwareController class	42
Figure 12 Configuration and linking settings	43
Figure 9 Configuration and linking settings	44
Figure 10 a sample JSON result of API.....	47

List of Tables
