ABSTRACT

The amount of power required to operate the telecom network is getting much higher depending on the size of the system deployed at the base stations. This may exceed a couple of kilowatts, occurring a high electrical and diesel cost. Considering the high operational and environmental cost of diesel generators and back-up batteries, major issues of power supplies such as cost effectiveness, energy efficiency etc. need to be addressed in optimum manner. This report is a comprehensive effort to identify the optimum way of providing grid power and the backup power for the telecom base stations. A user simulation model is proposed which result in the optimum power integration model with the best combination of battery backup, solar PV and diesel generator, that determines the optimal capital and operational cost for an on-grid site to give load, type and environmental factors. The techno economical feasibility is done for 6 nos of configurations and yields detailed graphical dashboard which enables the user to correlate the state of load, the power source combination and their conditions.

ACKNOWLEDGEMENT

First and foremost, I would like to express my sincere gratitude to my advisor Dr. W. D. Asanka S. Rodrigo, Senior Lecturer from Electrical Engineering Department at University of Moratuwa for the continuous support of my M.Sc. Study and research, for his patience, motivation, enthusiasm, and immense knowledge. Besides my advisor, I would like to thank the rest of the lecturers from Electrical Engineering Department at University of Moratuwa for their encouragement, insightful comments, and hard questions in progress reviews.

This research was supported by Dialog Axiata PLC. I thank the Head and my peers from Energy Management Division of Dialog who provided insight and expertise that greatly assisted in this research even with a massive workload and a special gratitude to Kasun Wijesinghe former MSc in Electrical Installations from University of Moratuwa as well as my office colleague for proving me the resource and a valuable knowledge in technical calculations and also with industrial references.

Last but not the least; I would like to convey my sincere gratitude to my spouse, parents and family members helping me in numerous ways to help achieving my targets all the time.

TABLE OF CONTENT

Declaration	1
Abstract	2
Acknowledgements	3
List of Figures	7
List of Tables	10
List of abbreviations	13
Chapter 1: Introduction	15
1.1 Background	15
1.2 Problem Statement	16
1.3 Objective	16
1.4 Methodology	17
Chapter 2: Literature Review	18
Chapter 3: Research Design	22
3.1 Site Categorization	22
3.1.1 Site categorization according to the applicable tariffs	22
3.1.2 Site categorization according to the power loading	23
3.2 Loads at Radio Base Station Site	23
3.3 Energy Sources at Radio Base Station Site	25
3.3.1 Grid Power	26
3.3.2 Diesel Generator (DG)	26
3.3.3 Battery	27
3.3.4 Solar	28

Chapter 4: Proposed Simulation Model for Energy Options for BTS Sites	30
4.1 Purpose of the Model	30
4.2 Input to the Model	30
4.2.1 Input for a New Site Model	31
4.2.2 Input for an On-Operational Site Model	32
4.3 Working of the Model	34
4.3.1 Technical Sizing of the Solution	34
4.3.2 Financial Projection	35
4.3.3 Optimization	35
4.3.4 Algorithms	35
4.4 Output of the Model	38
4.4.1 Output of New Site Model	38
4.4.2 Output of On-Operational Site Model	40
Chapter 5: Parameters Used In the Model	42
5.1 Parameters for Battery	42
5.2 Parameters Diesel Generator	43
5.3 Parameters for Solar Installation	45
5.4 General Parameters	46
Chapter 6: Calculation Procedure	48
6.1 Battery Bank Sizing	48
6.2 Diesel Generator Requirement	49
6.3 Solar Installation	50
6.4 Sample Calculation for New Site Model	51
6.4.1 Technical Sizing for New Site Model	51
6.4.2 Financial Projection for New Site Model	63

6.4.3	Output of New Site Model	75
6.5	Sample Calculation for On-Operational Site Model	80
6.5.1	Technical Sizing for On-Operational Site Model	80
6.5.2	Financial Projection for On-Operational Site Model	84
6.5.3	Output of On-Operational Site Model	85
Chapter 7: Result Verification		87
7.1	Case 1 - Welimuwapotana Dialog	87
7.2	Case 2 – Karandana Mobitel	92
Chapter 8: Conclusion		98
8.1	Simulation Results Discussion	98
8.1.1	Comparison for TCO	98
8.1.2	Comparison for Initial Capex	100
8.1.3	Comparison for Opex / Month	102
8.1.4	Comparison for Energy Cost/ Month	102
8.1.5	Comparison to Replacement Cost/ Month	103
8.2	Conclusions from Trials	103
8.3	Limitations	105
8.2	Suggestion for Further Study	105
