## Declaration

I declare that this dissertation does not incorporate, without acknowledgement, any material previously submitted for a Degree or a Diploma in any University to the best of my knowledge and belief, it does not contain any material previously published or written by another person or myself except where due reference is made in the text. I also hereby give consent for my dissertation, if accepted, to be made available for photocopying and for interlibrary loans, and for the title and summary to be made available to outside organization.

## *Dedication*

*This report is sincerely dedicated to*

*The farmers who are engaged in the cultivation of vegetables in spite of the hard-ship they encounter in their daily living work instinctively for the benefit of society.*

*The Research community in the field of Agriculture who are using their knowledge, technology and skills for the improvement of living standards of our people*

*The Policy makers whose sole interest is the up-liftment and  
Development of the country*

## Acknowledgements

I express my gratitude to Dean, faculty of Information Technology, University of Moratuwa for giving me the opportunity to follow the M.Sc. program.

I also sincerely thank to Mr. V.K. Nanayakkara, former Director of HARTI for granting me to follow this course of work.

I am very much grateful to Mr. S.C.Premarathne, Co-ordinator of M.Sc. Programme for giving me the necessary guidelines, valuable comments, suggestions and professionalisms towards improving the presentation of this project.

I wish to pay my tribute to staff of statistics and data processing unit of HARTI for their valuable support and cooperation extended to obtain survey data and related information required.

I would like to thank Mr. Channa De Alwis, Maintenance engineer, IT faculty, University of Moratuwa who encouraged and supported me in many ways.

## **Abstract**

Sri Lanka is one of the developing countries in South-Asian region where Agriculture remains the mainstay of economy and approximately 33% of the total labor force is engaged in Agriculture. Production of rice is the most important activity and cultivation of other cereals, vegetables and fruits are also prominently in the economy of Sri Lanka. Therefore it is very important to analyze the agricultural information for the purpose of formulating policies and also enhancing the knowledge of farmers to encourage them to be in the Agriculture. In this context, production, price fluctuations, forecasting, seasonal indices and the factors which could affect for these variables are highly important. In this project, four upcountry vegetables namely potatoes, beans, carrot and cabbage were selected and, an attempt was made to develop a web-based information system, which can be used for effective decision making on expected harvest of selected crops with the utilization of lands, according to Agro-ecological measures and demographic characteristics and also on seasonal indices and time series forecasting to educate farmers, consumers and other interested parties as well. The regression models for estimated harvest were developed with the use of SPSS statistical software from the raw data collected from a sample survey conducted in Matale, Kandy, Nuwara-eliya and Badulla districts. The information system will provide users to select key variables by district, crop and the season and any of pre-defined categories of independent variables identified by each model and then visualize the expected harvest. The seasonal indices and most appropriate price forecasting trend lines were generated by considering monthly prices for a period of 2001 to 2010. These three measures would be a total solution that is available in the system for effective decision making.

# Table of Contents

Declaration	i
Dedication	ii

Abstract	iv
Table of Contents	v
Chapter One – Introduction	01
1.1 Background Information	01
1.2 Problem in brief	05
1.3 Motivation	05
1.4 Proposed Solution	06
1.5 Objectives of the project	06
1.6 Summary	07
Chapter Two – Literature Review	09
2.1 Introduction	09
2.2 High temperature	09
2.3 Drought	09
2.4 Salinity	10
2.5 Flooding	10
2.6 Adaptation to climate change	10
2.7 Enhancing vegetable production system	10
2.8 Water saving irrigation management	11
2.9 Cultural practices	11
2.10 Prioritizing Vegetable research to address impact of climate change	11
2.11 Exploitation of Genetic Diversity	11
2.12 Increasing area under improved varieties	11
2.13 Vegetable nursery management	12
2.14 Protected cultivation	12
2.15 Vegetable seed production	12
2.16 Promotion of organic cultivation	12
2.17 Use of insect pollinators	13
2.18 Minimizing post harvest losses	13
2.19 Summary	13
Chapter three – Methodology	14
3.1 Introduction	15
3.2 Description of sample survey data	15
3.2.1 Demographic characteristics of farmer	16
3.2.2 Awareness regarding farming and technologies	16
3.2.3 Location and form of the land	19
3.2.4 Crop establishment	20
3.2.5 Coding of identified variables	20
3.3 Description of retail prices	22
3.4 Summary	22

Chapter four – Data analysis	23
4.1 Introduction	23
4.2 Sample size	24
4.3 Demographic characteristics of farmers	27
4.4 Awareness about agricultural information and technologies	29
4.5 Nature of land	30
4.6 Regression analysis	32
4.7 Seasonal Index	52
4.8 Price forecasting models	55
4.9 Summary	58
Chapter five – Requirement Analysis	59
5.1 Introduction	59
5.2 User requirements	59
5.3 Functional requirements	61
5.4 Non-functional requirements	61
5.5 Context Models	63
5.5.1 Context model for decision support system	63
5.5.2 Context diagram for calculating estimated harvest	64
5.5.3 Context diagram for visualizing seasonal indices	65
5.5.4 Context diagram for visualizing and actual and estimated prices	66
5.6 Summary	67
Chapter six – Technology adopted for the system	69
6.1 Introduction	69
6.2 Reasons for selecting proposed technology	69
6.3 Background of the technology used	69
6.4 PHP and Mysql's place in development	71
6.5 Technology architecture	72
6.6 Summary	72
Chapter seven – Implementation	73
7.1 Introduction	73
7.2 Basic mechanism for implementation	73
7.3 Information stored in the system	73
7.3.1 Background Information	74
7.3.2 Derived information	74
7.4 Components of the web-site	75
7.4.1 Estimated production process	76
7.4.2 Preview of seasonal indices	76
7.4.3 Preview of price forecasting	77
7.4.4 Preview of dynamic information	77
7.5 Implementation of components	77
7.5.1 Database implementation	77
7.5.2 Login module implementation	77

7.5.3	Calculating vegetable production	78
7.5.4	Displaying of price forecasting	79
7.5.5	Dynamic information implementation	79
7.5.6	Displaying of seasonal indices	80
7.5.7	Help module implementation	80
7.6	Summary	80
Chapter eight – Evaluation		81
8.1	Introduction	81
8.2	Achievements of the objectives	81
8.2.1	Data gathering	81
8.2.2	Creating a database	81
8.2.3	Regression models	82
8.2.4	Seasonal indices	82
8.2.5	Price forecasting	83
8.2.6	Web based information system	84
8.2.7	Assessment on results	87
8.2.8	Training and developments	87
8.3	Summary	88
Chapter nine – Conclusion and Further work		89
9.1	Overview	89
9.2	Assessment of the system	89
9.3	Problems encountered and limitation in development of project	91
9.4	Further developments	92
9.5	Summary	93
