Declaration

I declare that this is my own work and this dissertation does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

Dedication

This thesis is dedicated to my beloved wife, Dhanushka Priyangi, to my children's Oneli Sethumya and Methum Sethmina they have always encouraged me to do this master degree.

Also this thesis is dedicated to my parents, D M Jayasekara and Lalitha Ekanayake who have given me a tremendous education since beginning of my life, mother in law C. Herath, my brother Ranga and his wife Imali, sister in law Eranga and her husband Dananjaya.

Finally, this thesis is dedicated to all who believe in the richness of learning and value of knowledge sharing among members in communities.

Acknowledgement

This thesis would not have been imagined without kind support and response of many people.

Firstly, I would like to my sincere gratitude to Mr. Saminda Premaratne the supervisor for this project, whose guidance and comments have motivated and improved us throughout the research project. I would also like to kindly thank all of academic and non-academic staff of Faculty of Information Technology, University of Moratuwa, they help us to do our research by conducting a significant lecture series and laboratory sessions throughout the past two years.

The committed and reliable support of my family members have sustained and backed to the accomplishment of this thesis. I am very grateful for their support and understanding throughout during the research project.

The support and guidance given by my head Mr. Dinesh Perera is also helped me, who have given some superb support to do this master degree program.

Also I would like to thank all the survey participants who submitted their view point about ERP security. Without there feedbacks this project can't evaluate properly.

I would acknowledge all others who played a part, however small, in the success of this project. I offer my sincere gratitude to all of them. Thank you.

Abstract

There is a growing tendency in the security of an ERP systems. This has resulted in security issues when an implementing an ERP system. Despite many researchers have discovered various solution for the improve ERP system implementation security there are lack of solutions to analysis security issues of Microsoft Dynamics Navision ERP system.

The solution take various inputs parameters related to the ERP systems. Having giving the input system will be analysis the security threats related to ERP system. After the analysis phase system will produce a report; it consists a list of security issues, suggestions and solutions for those identified issues. This solution can be useful to; ERP systems security auditors, ERP systems own organizations, ERP systems implementation organizations or anyone who interested to investigate the ERP system implementation security issues.

System modules are developed using Open Source technology by using Apache as web server, MySQL as a database server and PHP/Perl/Python as scripting language. System uses existing Open Source libraries and security scanning tools to perform security analysis. The over system has been designed to work in platform independent manner. System can be accessible using any modern web browser also the users can access the system by hosting the application on they own or rented LAMP or WAMP server.

Based on the identified security issues online survey questionnaire was design to understand what target audience are really thinking about the ERP systems security. After the statistically analyzing collected data it shows that those identified issues are significant to the ERP systems security. After development of the security analysis tool, it was tested by the target audience by using the test cases. The results show that our solution can evaluated the ERP systems related security issues.

In summary, the proposed security analysis tool offers unique features necessary for the security of Microsoft Dynamics Navision ERP systems. It also overcomes the limitations associated with existing security approaches and enables the protection of the three major components; people, policy and technology.

Table of Contents

Declaration	i
Dedication	ii
Acknowledgements	iii
Abstract	iv
Table of Content	v
List of Figures	ix
List of Tables	xi
List of Abbreviations	xii
Chapter 1	1
Introduction.....	1
1.1 Prolegomena.....	1
1.2 Background and Motivation.....	2
1.3 Problem Definition.....	3
1.4 Aim.....	4
1.5 Objective	4
1.6 Resources Requirements	5
1.7 Structure of the Thesis.....	6
Chapter 2	6
Security Issues of an ERP Systems Implementation.....	7
2.1 Introduction	7
2.1.1 Components of an Information System	7
2.1.2 Facts about ERP Systems	8
2.1.3 Definition of ERP	8
2.1.4 Evolution of ERP.....	8
2.1.5 Characteristics of ERP.....	9
2.1.6 Benefits of ERP	9
2.1.7 ERP Limitations	10
2.1.8 ERP Risk Factors.....	10
2.1.9 Example ERP Security issues and vulnerabilities	11
2.1.10 Important Security Risks and Threats related to the ERP	12
2.2 Similar Research.....	12

2.3 Compare with Similar Solutions	15
2.4 Problem Definition.....	16
2.5 Summary	18
Chapter 3.....	18
Technology of ERP Security Analysis Tool	19
3.1 Introduction	19
3.2 Benefits and Usage of Open Source Technology.....	19
3.2.1 Kali Linux.....	19
3.2.2 LAMP Stack	20
3.2.3 Apache HTTP Server.....	20
3.2.4 MySQL Database Server	20
3.2.5 PHP Scripting Language	21
3.2.6 MySQL Database Management.....	21
3.2.7 LimeSurvey	22
3.3 Virtual Machine Technology.....	22
3.3.1 VMware Workstation	22
3.4 Dynamics NAV ERP System	22
3.5 Windows Active Directory Server	23
3.6 Microsoft SQL Server 2012 Server.....	23
3.7 Security Analysis Software Modules	23
3.8 Summary	23
Chapter 4.....	23
Approach to ERP Security Analysis Tool.....	24
4.1 Introduction	24
4.2 Solutions for the identified security issues.....	24
4.2.1 People related identified security issue solutions	24
4.2.2 Policy related identified security issues solution.....	25
4.2.3 Technology related identified security issue solution	26
4.3 Input to the system	27
4.4 Output.....	27
4.5 ERP System Security Scanning Process	28
4.6 Users.....	29
4.7 Features	29
4.8 Summary	30

Chapter 5	31
Design the ERP Security Analyses Tool.....	31
5.1 Introduction.....	31
5.2 Top Level Architecture.....	31
5.3 User Interface.....	32
5.4 NAV ERP Security Scanning Engine.....	32
5.4.1 NAV ERP Server Configurations Scanning Module.....	32
5.4.2 Dynamics NAV User Permission Sets Scanning Module.....	33
5.4.3 Dynamics NAV Change Log Auditing Module.....	33
5.4.4 ERP User Password Strength Analysis Module.....	33
5.4.5 Dynamics NAV User Session Analysis Module.....	33
5.4.6 Dynamics NAV Open Ports Analysis Module.....	33
5.5 Summary.....	34

Implementation.....	35
6.1 Introduction.....	35
6.2 Implementation of ERP Security Analyses Tool.....	35
6.3 User Interface.....	35
6.4 NAV ERP Server Configurations Scanning Module.....	36
6.4.1 NAV ERP Configuration File Uploading.....	36
6.4.2 Analysis Based on Predefine Security Rules.....	38
6.4.3 Security Issues Report.....	39
6.5 Dynamics NAV User Permission Sets Scanning Module.....	39
6.6 Dynamics NAV Change Log Auditing Module.....	41
6.7 User Password Strength Analysis Module.....	41
6.8 Dynamics NAV User Session Analysis Module.....	43
6.9 Dynamics NAV Open Ports Analysis Module.....	45
6.10 Software and Hardware Requirements.....	46
6.10.1 Software Requirements.....	46
6.10.2 Hardware Requirement.....	47
6.11 Implementation Challenges and Resolutions.....	47
6.12 Summary.....	48
 Chapter 7	 48

Evaluation.....	49
7.1 Introduction	49
7.2 Evaluation Technologies and Tool.....	49
7.3 Qualitative Measurements Evaluation	50
7.3.1 Sampling Plan.....	50
7.3.2 The Questionnaire.....	50
7.3.3 Analysis the Results.....	51
7.4 Summary	57
Chapter 8.....	57
Conclusion and Further woks.....	58
8.1 Introduction	58
8.2 Conclusion.....	58
8.2.1 Achievements.....	58
8.2.2 Problem Encountered	59
8.2.3 Limitations.....	60
8.3 Further Works	60
8.4 Summary	61
Reference.....	62
Appendixes.....	66
Appendix A – NAV ERP system	66
Appendix B – User Guide for the System.....	69
B.1 How we can access the system?.....	69
B.2 How do we scan NAV ERP server configuration?	70
B.3 How do we scan NAV ERP User Permission Issues?	72
B.4 how do we audit NAV change log issues?.....	74
B.5 How do we monitor NAV user sessions?	75
B.6 How do we audit NAV ERP users password strength?	76
B.7 How do we scan NAV ERP server open ports?.....	78
Appendix C – Test cases and test results	79
Appendix D – Questionnaire used for requirement analysis.....	81
Appendix E – Questionnaire used for evaluating the system.....	86
