## DECLARATION

I declare that this thesis is my own, unaided work, except where otherwise acknowledge. This is being forwarded for the degree of Master OF Engineering in the University of Moratuwa, Sri Lanka. It has not been submitted before for any degree or examination in any other University.

## ABSTRACT

Early thermal cracking in concrete water retaining structures mainly depends on temperature fall between hydration peak and ambient temperature ( $T_1$ ). Since values of  $T_1$  given in BS 8007, which is the code of Practice used in Sri Lanka for design of water retaining structures, are not valid for conditions in Sri Lanka, experimental investigations were carried out to obtain appropriate values of  $T_1$  for local conditions.

Temperature rise in concrete wall panels of 300mm, 500mm and 1000mm thick was monitored using thermocouples across the depth of each panel. A concrete mix with a cement content of 400 kg/m<sup>3</sup> was used. It was found that the  $T_1$  values for local cements with 12 mm plywood formwork are very much smaller than corresponding values given in BS 8007. Based on the test results  $T_1$  values were proposed for cement content of 400 kg/m<sup>3</sup> and 12 mm plywood formwork.

## ACKNOWLEDGEMENTS

I would like to thank Dr. Mrs. Hettiarachchi who encouraged me to involve with this research as a part of MEng. Degree and Sanken Lanka (Pvt) Ltd. for same.

Especially, I thank my project supervisor Dr. S.M.A. Nanayakkara, Senior Lecture, Department of Civil Engineering University of Moratuwa, who gave me both morale and logistical support to successfully carry out this type of research , which is most useful in the Design and Construction of water retaining structures.

I would also like to thank the Civil Engineering Laboratory Staff of University of Moratuwa and the Sanken Lanka's batching plant staff for their assistance in carrying out experimental work.

Lastly, thanks are due to my office staff who gave their support for preparation of the report.

## CONTENTS

Declaration .....	i
Abstract .....	ii
Acknowledgements .....	iii
Contents .....	iv
List of Figures .....	vii
List of Tables .....	viii
List of Appendixes .....	ix
1.0 Introduction .....	1
1.1 General .....	1
1.2 Temperature rise in concrete structures .....	1
1.3 Thermal stresses in concrete structures .....	2
1.4 Design of water retaining structures against cracking .....	4
1.5 Objective of study .....	7
2.0 Review of the literature .....	8
2.1 Early - Age Thermal Movements .....	8
2.1.1 Introduction .....	8
2.1.2 Basic Mechanism of Early - Age thermal Movements .....	9
2.1.3 Coefficient of Thermal Expansion .....	10
2.2 Evaluation of Temperature Rise .....	11
2.2.1 Section Thickness .....	12
2.2.2 Effect of Form Work & Insulation .....	13
2.2.3 Ambient Temperature .....	14
2.2.4 Concrete Placing Temperature .....	14
2.2.5 Concrete Mix Proportions .....	16
2.2.6 Ordinary Portland Cements.....	17

2.3	Restraint to Early - Age thermal movement .....	18
2.3.1	External Restraint .....	18
2.3.2	Internal Restraint .....	19
2.3.3	Combined Internal and External Restraint .....	20
2.4	Tensile Strain Capacity .....	22
2.4.1	General Principles .....	22
2.4.2	Effect of Aggregates .....	23
2.4.3	Other Factors.....	24
2.5	Estimating the Likelihood of Cracking .....	24
2.6	Type of cracking and Significance of Cracking .....	26
2.6.1	Cracks which Affect the Structural Integrity .....	27
2.6.2	Cracks which Lead to Durability Problems .....	27
2.6.3	Cracks which Lead to a Malfunction of the structure .....	28
2.7	Control of Cracking .....	28
2.7.1	Mix Proportions.....	29
2.7.2	Concrete Placing Temperature .....	30
2.7.2.1	Cooling of Aggregates & water.....	30
2.7.2.2	Ambient Temperature .....	31
2.7.2.3	Cooling the freshly placed concrete .....	31
2.7.3	Influence of Form work .....	32
2.7.3.1	Form work material .....	32
2.7.3.2	Form work striking times .....	32
2.7.4	Influence of Construction Sequence .....	33
2.7.5	Provision of Movement Joints .....	34
2.7.6	Control of Crack widths by Reinforcement .....	36
2.8	Cracking due to heat of hydration and drying shrinkage in immature concrete .....	36
2.8.1	Calculation of crack width due to thermal and drying shrinkage based on BS 8007.....	36
2.8.2	Fall in Temperature between the hydration peak and ambient (T1) .....	37

3.0	Experimental Investigation.....	39
3.1	Size of the specimen.....	39
3.2	Grade of concrete .....	39
3.3	Measurement of temperature .....	41
3.4	Test Results .....	41
3.5	Further experimental investigation .....	45
3.6	Discussion .....	47
4.0	Conclusions.....	48
	References .....	49
	Appendixes .....	50
