DECLARATION

I declare that this is my own work and this thesis does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my thesis/dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

ABSTRACT

Travel and tourism industry is one of the largest and growing industries in the world that depends on choices and demands of travellers. The identification of these choices and demands will provide benefits to both service providers in the industry and travellers. The use of data analytics to achieve this has been discussed briefly over the years using different types of data. The findings of these studies were inconclusive due to limitations in the selected data types, features and analysis techniques. This research aims to overcome these limitations by identifying the factors that impact the choices of travellers, establishing a feature framework to identify those choices, finding the feasibility of using time series forecasting to predict travellers' demand and proposing the use of data analytics in travel insurance. The limitations in previous studies and the unavailability of necessary data for research have increased the importance of using data analytics in travel insurance, an industry within travel and tourism industry. This research achieves its objectives by conducting a study with data from the UK, one of the best performing outbound markets in the world. The data was analysed using data analytics techniques to find the destination and travel mode choices of travellers and two other subgroups, travellers with medical conditions and cruise travellers. The number of outbound trips and the visitors for destinations were forecasted for a year to find the feasibility of using time series forecasting to predict travellers' demands. The results of the analysis confirm that a traveller's age, group type they choose to travel under, and their health have an impact on their destination and travel mode choices, and the two choices have an impact on each other. The study finds that time series forecasting is a reliable demand forecasting technique when a large data set is available.

Keywords: Outbound Markets, Travel Demand, Travel Patterns, United Kingdom

ACKNOWLEDGEMENT

I wish to express my sincere gratitude to all those who helped me in successfully completing my research study on “Catering to United Kingdom’s Outbound Market”.

First and foremost, I wish to thank my research supervisors Dr. Amal Shehan Perera, Head of Department, Department of Computer Science and Engineering, University of Moratuwa, and Prof. Sanath Jayasena, Associate Professor, Department of Computer Science and Engineering, University of Moratuwa for their continuous support, encouragement and attention extended to me in realising the research objectives.

I wish to convey my special gratitude to Ms. Dinushka Peiris, Director, Research, Sri Lanka Tourism Development Authority for validating the findings of the research. Furthermore, I extend my thanks to Ms. Nirmala Chandrasiri for her help in proofreading the thesis and colleagues at my workplace for all their help.

My heartfelt appreciation goes to my father, mother and brothers for all the encouragement, care and unconditional support given to me throughout the good and bad times during this research.

Finally, I wish to convey my heartfelt thanks to all those who helped me in many ways for bringing this study a success.
