

# **EVALUATION OF THERMAL STRESSES IN MASS CONCRETE**

Dissertation submitted to  
THE UNIVERSITY OF MORATUWA  
In partial fulfillment of the  
Requirements for the degree of  
MASTER OF ENGINEERING  
IN STRUCTURAL ENGINEERING DESIGN  
By  
W.S.U.KUMARA

Department of Civil Engineering  
UNIVERSITY OF MORATUWA, SRI LANKA

## Abstract

Development of stresses due to thermal effect with different type of restraints conditions is a major problem for mass concrete structures. This report presents two methods, which can be used for thermal stress analysis with known temperature distribution. For most thick sections, the temperature distribution across the section is parabolic. A literature survey was carried out to get general knowledge about mass concrete behavior, reasons for development of tensile strain in concrete and factors affecting the cracking of concrete due to temperature rise in concrete. It is learnt that tensile stresses that developed in two to three days after casting may be greater than tensile strain capacity of the concrete at that age and lead to crack. Usually, top surface of the concrete is in tension while middle part is in compression. There is a chance to develop tensile forces in bottom part of concrete, but this may not be critical due to low thermal conductivity of the sub grading material. Also it was confirmed by this analysis that concrete will crack when the limiting temperature difference is between  $20^{\circ}\text{C}$  -  $23^{\circ}\text{C}$  for granite aggregate Concrete used in Sri Lanka.

## **DECLARATION**

I. here by confirm that this dissertation is submitted in partial satisfaction of the requirements for Master of Engineering in Structural Engineering Design and it is the result of my own investigation and that has not been submitted in candidature for a degree /diploma of this University or any other University.

## ACKNOWLEDGEMENTS

The author would like to express his sincere gratitude to Department of Civil Engineering of University of Moratuwa for the facilities provided to undertake this project.

He is also most grateful to his supervisor, Prof S.M.A.Nanayakkara of the Department of Civil Engineering, University of Moratuwa for his valuable suggestion, guidance, encouragement and helpful advice during the elaboration of this dissertation.

The author would like to thank his organization, **CENTRAL ENGINEERING CONSULTANCY BUREAU** for the sponsorship and study leave granted to follow the course without which this work would not have been possible.

The author also like to thank Eng Wannigama for providing temperature records of Kelanithissa combing cycle power plant which are very important to this studies.

Finally, thanks are also due to author's wife, Niluka, and his parents for their encouragement to write this report.

# CONTENTS

Declaration	I
Acknowledgements	II
Abstracts	III
List of figures	VII
List of tables	IX
Chapter 1	
1. Introduction	01
1.1 Objectives	02
1.2 Scope of study	02
1.3 Methodology	03
Chapter 2	
2.1 Basic mechanism of early age thermal cracking	04
2.2 Heat of hydration	06
2.3 Effect of temperature on the hydration process	07
2.4 Evaluation of temperature rise	08
2.4.1 Section thickness	08
2.4.2 Formwork and insulation	08
2.4.3 Effect of ambient temperature	11
2.4.4 Concrete placing temperature	11
2.4.5 Cement type	12
2.4.6 Concrete mix proportions	14
2.5 Temperature effects in mass pours	14
2.5.1 Restraint	14
2.5.2 Internal restraint	15
2.5.3 Stress distribution and cracking	16
2.5.4 External restraint	18
2.5.6 Stress distribution	18

2.6 Prediction of likelihood of cracking	20
2.6.1 Tensile strain capacity	22
2.6.2 Effect of aggregate and cement content	23
2.6.3 Coefficient of thermal expansion	24
2.6.4 Creep	25
2.7 thermal characteristics of concrete	26
Chapter 3	
3.1 Application of thermal analysis method	27
3.1.1 Level one analysis	27
3.1.2 Level two analysis	28
3.1.3 Level three analysis	28
3.2 Cracking analysis	29
3.2.1 General	29
3.2.2 Mass gradient restraint	29
3.2.3 Surface gradient restraint	30
3.2.4 Mass gradient cracking	30
3.2.5 Surface gradient cracking	30
3.2.6 Mass and surface gradient interaction cracking	31
3.3 Mass gradient cracking analysis	31
3.3.1 Mass gradient restraint factor	32
3.3.2 Structure restraint factor	32
3.3.3 Foundation restraint factor	33
3.4 Surface gradient cracking analysis	35
3.4.1 Internal restraint factor	36
3.4.2 Determination of temperature gradient and Surface gradient tension block	37
3.4.3 Restraint factor	40
3.4.4 Determination of mean temperature	41

Chapter 4	
4. Calculation of surface gradient cracking in a Raft Foundation	43
4.1 Temperature data	43
4.2 Calculation for surface gradient cracking analysis	48
Chapter 5	
5. Conclusion	66
5.1 Further investigation	66
References	67
