Date

To the best of my knowledge, the above particulars are correct

Supervisor
2.8.1 The friction force
2.8.2 Surface texture properties and pavement friction
2.8.3 Measuring of skid resistance
  2.8.3.1 Method 1- Lock wheel testing
  2.8.3.2 Method 2- Sand patch testing
2.9 Traffic
  2.9.1 Traffic management
  2.9.2 Methods of traffic control
  2.9.3 Traffic control and singing
2.10 Machines used for chip seals.
  2.10.1 Spreaders
  2.10.2 Distributors
    2.10.2.1 Pressurized tank distributor
    2.10.2.2 Constant rate of spread distributors
    2.10.2.3 Bitumen binder spray bars
  2.10.3 Rollers
  2.10.4 Sweepers
2.11 Health and Safety
2.12 The surface dressing operation
2.13 The surface dressing process
2.14 Job sheet
2.15 Quality control
2.16 Evaluation of pavement surface properties
2.17 Noise and wear
2.18 After care

Chapter 3.0: Methodology

3.1. Introduction
3.2. Selection of road
3.3. Determination of aggregate size and spread rate
3.4 Selection of binder
3.5 Determination of CRS2 emulsion spray rate
3.6 Comparisons with RDA specifications and TRL rates
3.7 Calculation of number of test spots and their locations
Acknowledgements

I would like to express my deepest gratitude to the advisor, Dr. M.A.W. Kumara, for all his guidance and patience throughout the course of this research. I would also like to thank Professor Manjrika Gunaratna for his valuable advice and comments. I also would like to thank the evaluation committee for their suggestions and comments. I further wish to thank the staff members of Transport Engineering Division for their support to prepare this thesis. I also thank Road Development Authority (RDA) for sponsoring me to follow this course of studies and continuous support to carry out our research work using RDA funds and workers. Finally I would like to thank my family members and staff members of Executive Engineer’s office Nalanda for helping to carry out the research in many ways.
# Table of Contents

**Chapter 1.0: Introduction**

1.1 Background .............................................. 1
1.2 Surface dressing applications in Sri Lanka ............. 3
1.3 Problem statement .................................. 6
1.4 Objectives .......................................... 6
1.5 Research scope .................................. 6

**Chapter 2.0: Literature review**

2.1. Introduction ......................................... 8
2.2. Specifications for the design ......................... 8
2.3. Design parameters ................................ 9
2.4. Establishment of commercial Average Daily Traffic (ADT) 9
2.5. Selection of type of dressing ....................... 9
   2.5.1 Single surface dressing .......................... 10
   2.5.2 Double surface dressing ......................... 10
   2.5.3 Triple surface dressing .......................... 11
   2.5.4 Racked-in surface dressing ..................... 11
   2.5.5 Pad coat seals .................................. 12
   2.5.6 Sandwich surface dressings ..................... 12
2.6 Selection of a suitable surface dressing .............. 12
2.7. Materials ........................................... 13
   2.7.1 Selection of aggregates .......................... 13
   2.7.2 Spread rate of aggregates ....................... 15
   2.7.3 Types of emulsions ........................................... 16
   2.7.4 Rate of spread of binder ....................... 17
   2.7.5 Spray rate adjustment factors .................. 20
   2.7.6 Bitumen emulsion testing ....................... 21
   2.7.7 Bitumen emulsion storage ..................... 21
   2.7.8 Adhesion promoters ........................................... 22
   2.7.9 Emulsion transport ........................................... 22
2.8. Skid resistance ..................................... 22
2.8.1 The friction force
2.8.2 Surface texture properties and pavement friction
2.8.3 Measuring of skid resistance
  2.8.3.1 Method 1- Lock wheel testing
  2.8.3.2 Method 2- Sand patch testing
2.9 Traffic
  2.9.1 Traffic management
  2.9.2 Methods of traffic control
  2.9.3 Traffic control and singing
2.10 Machines used for chip seals
  2.10.1 Spreaders
  2.10.2 Distributors
    2.10.2.1 Pressurized tank distributor
    2.10.2.2 Constant rate of spread distributors
    2.10.2.3 Bitumen binder spray bars
  2.10.3 Rollers
  2.10.4 Sweepers
2.11 Health and Safety
2.12 The surface dressing operation
2.13 The surface dressing process
2.14 Job sheet
2.15 Quality control
2.16 Evaluation of pavement surface properties
2.17 Noise and wear
2.18 After care

Chapter 3.0: Methodology

3.1. Introduction
3.2. Selection of road
3.3. Determination of aggregate size and spread rate
3.4 Selection of binder
3.5 Determination of CRS2 emulsion spray rate
3.6 Comparisons with RDA specifications and TRL rates
3.7 Calculation of number of test spots and their locations
3.8 Carrying out the surface dressing 51
3.9 Chip removal test 52
3.10 Surface dressing done by RDA routine method 54
3.11 Locked wheel test 55
3.12 Sand patch test 56

Chapter 4.0: Data and observation 57
4.1 Traffic counts 57
4.2 Aggregate removal rate test 58
  4.2.1 Aggregate removal in 6.3mm test spots 59
  4.2.2 Aggregate removal in 9.5mm test spots 59
  4.2.3 Aggregate removal in 12.5mm test spots 59
  4.2.4 Surface dressing photos-12.5mm 60
  4.2.5 Surface dressing photos-9.5mm 61
  4.2.6 Surface dressing photos-6.3mm 62
  4.2.7 Data obtain from routine surface dressing site done by RDA 63
4.3 Skid resistance test 64
  4.3.1 Measurement technique 1 - Locked wheel testing 64
  4.3.2 Measurement technique 2 - Sand patch method 64

Chapter 5.0: Analysis and discussion of results 65
5.1 Aggregate removal test for the surface dressing 65
  5.1.1 Analysis of aggregate counting data 68
    5.1.1.1 Statistical test for surface exposed area 69
5.2 Comparison of data from design test results 70
  with RDA regular surface dressing test 70
    5.2.1 Statistical test for surface dressing methods 71
5.3 Skid resistance test 72
  5.3.1 Locked wheel test 72
    5.3.1.1 Statistical test for skid numbers 73
  5.3.2 Sand patch test 74
    5.3.2.1 Statistical test for sand patch thickness test 75
5.4 Comparison of results 75
5.5 Application of test results to other roads 77
Chapter 6.0 Conclusions and recommendations

6.1. Conclusions

6.2. Recommendations
