Acknowledgement

I wish to express my sincere gratitude to the University of Moratuwa, Department of Civil Engineering for giving me an opportunity to do this study on Socio-economic Impact of Connecting Rural Villages to National Grid in Western Region of Sri Lanka which was an invaluable experience.

I deeply appreciate Dr. Rangika U. Halwatura my Supervisor, Department of Civil Engineering, University of Moratuwa, for his continuous support and guidance rendered during the period of this research dissertation.

Further, I would like to acknowledge with due respect Prof. Ashoka Perera, Dr. L. Ekanayake and Mr. Piyal Ganepola of the Department of Civil Engineering, University of Moratuwa for their valuable suggestions, comments and encouragement during the progress presentations. In addition, I would like to thank all non academic staff members of the Construction Management Unit of Department of Civil Engineering for their support throughout the period.

My respect goes to Eng. Mrs Yamuna Samarasinghe -Deputy General Manager, Eng. N.T. Colombage -Deputy General Manager, Eng Priyadarshana Dias – Electrical Engineer, Mr. Anura Wijesinghe – Information Technology Officer, Mr. R.S. Perera – System Analyst, Mr. D.R.M. Ariyaratne – Electrical Superintendent, Mr. S.U. Hewagama – Electrical Superintendent, Mr. Hasantha Keerthisinghe, Mr.Indika Nishantha, Mr. Priyantha Piyasena and Mr.Piyal Ranjith De Silve of Ceylon Electricity Board, for their Continuous support given throughout my research. My sincere gratitude also goes to Mr. K.M Chandrasiri, Mr.K.A.Jayalal and Mr.S.A.Chandana Prasanga for the support rendered for me during the survey in villages.

I express my sincere thanks and appreciation to my husband and kids for their understanding, motivation and support given to make the priority on this by sharing my responsibilities. Last but not least, I would like to thank to all my colleagues and friends specially Mr. Prasad Indika Perera who helped me in this dissertation.

Abstract

Electricity plays a key role in economic and social development of a country. In developing countries, providing all citizens access to modern forms of energy, especially electricity is among the central energy policy objectives. The nexus between modern energy services and human development are widely recognized.

By 2010 only 85% of the population of Sri Lanka had direct access to grid electricity. The intention of development in rural electrification was to provide household benefits, improvement in health services, improvement to education, community benefits, incentive to build houses and improvement to small industries and small commercial activities within the rural community. Further, to achieve the goal of self sufficiency and uplifting the national economy.

However time has come to review the socio-economic impacts on rural communities by having access to standard national energy supply to understand the current issues after electrification. Whether the development intended has been achieved, if not what further actions to be taken to get the maximum benefits over this huge investment.

In this study, some of the rural villages in Kalutara District were focused to identify the impact on access to grid electricity. It was evident that the households were extremely satisfied with grid electricity service that has replaced their kerosene lamps and solar home systems which had been providing their lighting requirements. Longer study hours of children, longer television watching hours for the family and elimination of dirty and hazardous kerosene lamp has improved their quality of life. Migration to urban areas is almost eliminated. But it was revealed that no significant use of electricity for income generating activities such as agriculture, food processing, small industries and small commercial activities are taking place and no authority has touched the valuable source of energy for rural industry and commercial activity development.

It is concluded that the large scale penetration of grid electricity has helped the rural communities in terms of improved socio-economic conditions and bring the modernity to the village. But the country needs to seriously examine its options to motivate, train, and technically assist to rural communities to promote agro-based industries and commercial activities in rural areas. Thereby providing the maximum benefits for the rural communities by electrification and maintaining a healthy and evenly loaded power system throughout the day.

Key words: Electricity, Rural electrification, Socio-economic impact, Income generation

Questionnaire Relevant to RE Scheme.

1. Scheme Name:
2. Occupation
3. Number of members in Family
4. Average monthly expenditure

Before Electrification

5. Kind of fuel used **before electrification**

	SHS	Firewood	Kerosene	Other
Lighting	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
Cooking	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
Other	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

6. Amount spent on fuel per month **before electrification** Rs.....

7. What problems you faced without electricity.

Uncomfortable at home	<input type="text"/>	High expenses on Fuel	<input type="text"/>	Shorter study time	<input type="text"/>
Accidents due to unsafe kerosene lamps	<input type="text"/>	could not work longer hours	<input type="text"/>	No self esteem	<input type="text"/>
could not do business/industry	<input type="text"/>				

After Electrification

8. Kind of other fuels **presently** used. (After electrification)

	SHS	Fire wood	Kerosene	Others
Lighting	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
Cooking	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
Other	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

9. **Present expenses** on fuel per month.(After Electrification) Rs.....

10. Primary usage electricity supply

Residential purpose	Comfort at home	<input type="text"/>
	Support education of children	<input type="text"/>
	Entertainment	<input type="text"/>
Operating machinery		<input type="text"/>
Agricultural purpose		<input type="text"/>
Other industrial purpose		<input type="text"/>
Farming		<input type="text"/>
Trading		<input type="text"/>
Work long hours		<input type="text"/>

11. Average monthly expenditure for electricity

Rs 100-200	<input type="text"/>	Rs 200-300	<input type="text"/>	Rs 300-400	<input type="text"/>	Rs 400-500	<input type="text"/>
Rs. More than 500	<input type="text"/>						

12. Kind of electrical appliances used

Electric bulbs	<input type="text"/>
Electric hot plates	<input type="text"/>
Electric heaters	<input type="text"/>
Electric iron	<input type="text"/>
Television/Radio	<input type="text"/>
Electric Fan	<input type="text"/>
Water pump	<input type="text"/>
Refrigerator	<input type="text"/>
Blender	<input type="text"/>
Rice Cooker	<input type="text"/>

Any other (Please Specify)

University of Moratuwa, Sri Lanka.
Electronic Theses & Dissertations
www.lib.mrt.ac.lk

13. Self employment project or any other Income generating activity that started using electricity:

Yes No In future No Idea

14. If yes, what is it?.....

15. If you have started an income generating activity using electricity did you

Obtained any financial assistance from banks:	Yes <input type="text"/>	No <input type="text"/>
Obtained any training:	Yes <input type="text"/>	No <input type="text"/>
Obtained any technical assistance.	Yes <input type="text"/>	No <input type="text"/>

16. Any other infrastructure development after electrification

Roads Telecommunication Health Clinic/Dispensary School

17. Do you think that electricity has enlighten your life Yes No

18. In what means would you like to improve your standard of living

6.	Scheme Ref. No.	IRAN/AG/WL/010

Section II

1.	CEB Province	WPS 1
2.	(Administrative) Province	Western Province
3.	Consumer Service Centre	Matugama
4.	Divisional Secretariat	Walallawita
5.	GN Division	Ihala Hewessa
6.	Village/s	Mananhena
7.	Initiated by	
8.1	Population of the Village	431
8.2	Total No. of Houses	120
8.3	No. of Households of Village(s) covered by the RE Scheme	86
8.4	No. of houses beyond 100m from the feeder.	14
9.	No. of persons directly benefited by RE Scheme	
10.	Village economic activity : Mainly : Others : 1 2	Agriculture
11.	No. of persons receiving food stamps	42
12.	No. of employees in Schemes : 1. Public Sector 2. Private Sector 3. Self Employment	3 14 38
13.	Approximate land values in scheme area ; 1. Within developed area 2. Outside developed area	

Notes for :

8.1 & 8.2 *Population & No. of Households as at date of investigation. Population be checked with 2001 census available with GN*

8.3 *Count number of houses within 100 Meters from the proposed LV Lines of the scheme.*

9 *The persons benefited are 1. Members of the house.
2. Number of employees in prospective Industries & Commercial establishment.*

10 *Village economic activities to be classified under coconut growing, rubber growing, tea growing, paddy*

Appendix II

cultivation general agriculture, bricks & tiles manufacturing, gemming, timber craft external employment, tourism, fishing, food processing and others.

TECHNICAL DATA

1.	Capacity of the Transformer (kVA)	100
2.	Medium Voltage of the System	33kV
3.	Length of MV Line (km)	1.35
4.	Length of 3 phase line only (km)	6.12
5.	Length of 3 phase line on Existing MV Poles (km)	
6.	Length of 3 phase line on Proposed MV Poles (km)	0.85
7.	Closest Grid Substation	Matugama
8.	Installed Capacity of Grid Sub. (MVA)	94.5
9.	Peak Load of Grid Sub (MVA)	55
10.	MV Feeder closest to Scheme	Kithulgoda
11.	MV feeder distance to the scheme	
12.	Present load on feeder (peak) Amperes : Day : Night	70 120
13.	Additional load due to scheme (peak) Amperes : Day : Night

DIRECT ENVIRONMENTAL IMPACT ASSESSMENT

		HT	LT
1.	Approximate No. of trees required to be felled for HT Line/LT Lines * Rubber		
	* Coconut		
	* High value trees		
	* Others		
2.	Does the proposed HT Line/LT Lines run through		
	a. Forest reservations (y/n)	N	N
	b. Archaeological reserves (y/n)	N	N
	c. Estate lands (y/n)	N	N
	d. Paddy fields (y/n)	N	N
3.	Will the proposed LT Lines require Widening of rural roads or pathways Yes/No No If yes approximate length (Km)		
4.	Will the proposed substation require Clearing of existing Yes/No No If yea give nature of cleaning and extend :		

5. Proposed remedial measures (briefly) :

CHECK LIST FOR DISTRIBUTION SUB PROJECTS WITH CAPITAL INVESTMENT LESS THAN \$ 100,000

1. Distribution Substations (Including Approach Roads) :
 1. Are any homes for more than 5 percent in all to be demolished/R\relocated? N
 2. Are more than 2 hectares of farmland or 1 hectare of forest/wetland to be converted to other use? Y/N N
 3. Are more than 5 high-value trees and/or 10 trees in all to be cut down? N
 4. Are PCBs and/or asbestos from old transformers to be disposed off? N
 5. Are prescribed safety measures not provided? N
 6. Is a freshwater source located at the site of the substation? N
2. Power Lines (Including Maintenance Roads) :
 1. Are any homes for more than persons in all to be demolished/relocated? N
 2. Are more than 2 hectares of farmland or 1 hectare of forest/wetland to be converted to other use? N
3. Are more than 15 high-value trees and/or 50 trees in all per kolometer of distribution line to be cut down? N
4. Are the power lines located on irrigation/perambulation paths of wildlife? N

Appendix II

5. Are the proposed power lines visible from generally recognized scenic sites/views? N
6. Are the proposed power lines within 50 meters of historical/heritage sites? N
 1. Do the proposed power lines pass through a protected area, old growth forest, or wildlife/bird reserve? N
 2. Do the proposed power lines require widening of more than 2 kilometers (km) of rural roads/pathways? N
7. Do the proposed power lines traverse irrigation tanks and/or canals? N

Note : A single "Y" in answer to the above questions will mean that an IEE should be prepared
