Acknowledgements

This research study was carried out as part of the MBA in IT program conducted by the University of Moratuwa. I would like to thank Dr. Sarath Dassanayake who supervised this research, for giving valuable guidance and advise in carrying out the research activities effectively. I also like to thank all the staff members of Computer Science and Engineering Department and the Management of Technology Department of University of Moratuwa for their assistance.

Mr. Anura Jayathilake, Head of the Environmental Economics and Global Affairs Division of the Ministry of Environment of Sri Lanka deserves special thanks for providing valuable information about local projects under Clean Development Mechanism (CDM) and the contact details of the companies and information relating to the regulatory framework and the certification process under the Kyoto protocol. I would also like to thank all the private companies who responded to the questionnaire by providing data on CDM project activities and the financial information relating to these projects.

Finally I would like to thank all my friends and family members, specially my wife for assisting in many ways to complete the research on time.

List of Tables	5
List of Figures	5
Appendices	6
Acronyms	7
Abstract	8
1 Introduction	10
1.1 How Kyoto Protocol works	11
1.2 How Kyoto Protocol enables Carbon Emission Trading	13
1.3 Local Context with relation to Kyoto protocol	15
1.4 Existing research on related topics	17
1.5 Research Objectives	18
1.6 Importance of the study	19
1.7 Methodology	20
1.8 Organization of the study	23
1.9 Limitations of the study	24
2 Analysis of global and local carbon emission trading	26
2.1 Carbon emission data for Annex I countries	26
2.2 Reduction targets for Annex I countries	27
2.3 Current economic data related to global carbon trading	28
2.4 Local CDM projects	30
2.5 Methods of financing available for CDM projects	33
2.6 International exchanges	36
3 Market mechanisms for carbon credits as a tradable commodity under Kyoto protocol	38
3.1 Demand and supply analysis	38
3.2 Analysis of factors affecting price	44
3.3 Liquidity and volatility of the commodity	45
3.4 Economic analysis of local CDM projects	46
3.5 Proposed trading model for an electronic exchange	47

4	Use of an electronic trading system to improve trading efficiency and liquidity of CERs	52
4.1	Analyze suitability of an electronic trading system for Carbon Credits	52
4.2	Improving liquidity of the commodity	56
4.3	Reducing price volatility of the commodity	57
4.4	Benefits for different stakeholders from an electronic trading system	57
4.5	Suitable scope for the implementation of the trading system	58
5	Financial feasibility of implementing an electronic trading system to trade carbon credits under Kyoto protocol	61
5.1	Stakeholder analysis	61
5.2	Profitability analysis for the commodities exchange	62
5.3	Profitability analysis for the participating brokers	64
6	Summary and conclusions	66
6.1	Summary	66
6.2	Findings	67
6.3	Conclusions	69
6.4	Policy implications and recommendations	72
6.5	Agenda for further study	73
	References	75
	Appendix	77
