UNIVERSITY OF MORATUWA

LAND USE / TRANSPORT MODEL
FOR
COLOMBO METROPOLITAN REGION

BY
I. K. WIJERATNE
B.Sc. (Science)

A PROJECT REPORT SUBMITTED IN PARTIAL FULFILLMENT OF THE
REQUIREMENTS FOR THE DEGREE OF MASTER OF SCIENCE IN
TRANSPORTATION

SUPERVISED BY
DR. AMAL S. KUMARAGE

Department of Civil Engineering
University of Moratuwa
Sri Lanka
November, 2001
Acknowledgement

I express my sincere gratitude to my supervisor Dr. Amal S. Kumarage, for the valuable advice and support extended to me for completion of my work.

My appreciation would be incomplete, if I do not mention the support and help extended to me by Dr. J. M. S. J. Bandara.

I owe to the staff of the Division of Transportation Engineering, University of Moratuwa for supporting me to undertake the thesis work.

I would like to extend my gratitude to Shantha Mahawela, Mala Ranawake, Patric Classen and Nishantha Bandara for their laudable support throughout my thesis writing.

Above all, I wish to thank my husband Lal, without whose moral support, I would not have been able to complete my thesis.
I dedicate this to my loving mother,

The mentor of my life.
# 1. Introduction

1.1 Use of Transport Models ................................................................. 1  
1.2 Types of Transport Models ............................................................. 1  
  1.2.1 Physical Theories ................................................................. 1  
    1.2.1.1 Gravity Model .............................................................. 2  
    1.2.1.2 Entropy Maximisation .................................................... 2  
  1.2.2 Economic Theories ............................................................... 2  
    1.2.2.1 Macroeconomic Models .................................................. 3  
    1.2.2.2 Microeconomic Models .................................................. 3  
  1.2.3 Utility Maximisation Theory .................................................. 4  
    1.2.3.1 Deterministic Models .................................................... 4  
    1.2.3.2 Stochastic Models ......................................................... 5  
1.3 Transport Studies Carried out in Sri Lanka ................................. 5  
1.4 Transport Models in Sri Lanka .................................................... 7  
  1.4.1 Transport Sector Planning Study .......................................... 7  
  1.4.2 DEMIDEPT Model ............................................................... 8  
  1.4.3 TRANSPLAN™ ................................................................. 8  
  1.4.4 CUTS Models ................................................................. 8  

# 2. Study Area - Colombo Metropolitan Region Area

2.1 Study Area in General ................................................................. 9  
2.2 Background of Land Use and Transport in CMR .............................. 12  
  2.2.1 Socio-economic Data .......................................................... 12  
    2.2.1.1 Land Area ................................................................. 12
3. Data Collection and Analysis

3.1 Socio-economic data

3.1.1 Gross Domestic Product (GDP) ........................................... 23
3.1.2 Population ........................................................................ 24
3.1.3 Number of Housing, Households and Household Sizes ............ 29
3.1.4 Vehicle Ownership Rate ..................................................... 32
3.1.5 Employment and Jobs .......................................................... 38
  3.1.5.1 Jobs .............................................................................. 38
  3.1.5.2 Employment ................................................................. 39
3.1.6 Income ............................................................................. 41
3.1.7 Urbanised Areas and Growth Centres .................................... 43

3.2 Road Network Data ............................................................... 47

3.3 Traffic Data

3.3.1 General ............................................................................. 51
3.3.2 Adjusting time frames .......................................................... 51
3.3.3 Survey Locations ................................................................. 52
3.3.4 Data Conversion ................................................................. 53
3.3.5 Sample Size ...................................................................... 53
3.3.6 Process of Analyzing of Survey Data ...................................... 57
3.3.7 Traffic Data ...................................................................... 57
4. Model Calibration

4.1 General .......................................................... 60
4.2 Base Model ...................................................... 60
4.3 Definitions

4.3.1 F-Statistics .................................................. 61
4.3.2 f-significance ................................................ 61
4.3.3 Coefficient of Determination (R^2) ...................... 62
4.3.4 Adjusted R^2 (R^2_a) ....................................... 62
4.3.5 Testing Hypotheses ........................................ 63
4.4 Variables Tested with Inter Zonal Trip Generation .... 63

4.4.1 Friction factor ............................................... 64
4.5 Other Main Variables Tested with Inter Zonal Trip Generation ..................... 66
4.6 Variables Selected for Mode ................................ 66

4.6.1 Residuals .................................................... 67
4.7 Correlation Coefficients ....................................... 69
4.8 Error Analysis ................................................ 71

5. Application

5.1 Example 1

5.1.1 Estimating Inter Divisional Trips for 2010, using Future Socio-economic Data .............................................. 75

5.1.2 Network Data ................................................ 75
5.1.2.1 Distance Between DSDs .............................. 75
5.1.2.2 Travel Time Between DSDs ......................... 75

5.1.3 Socio-economic Data

5.1.3.1 Population ................................................ 76
5.1.3.2 Number of Households ............................... 76
5.1.3.3 Number of Jobs ........................................ 76
5.1.3.4 Vehicle Ownership ..................................... 79

5.1.4 Outputs of Example 1 ....................................... 79

5.2 Example 2

5.2.1 Estimating Inter Divisional Trips considering job opportunities changes from fort area to Battaramulla area .............................................. 81
5.2.2 Network Data

5.2.3 Socio-economic Data
5.3.3.1 Population
5.3.3.2 Number of Households
5.3.3.3 Number of Jobs
5.2.3.4 Vehicle Ownership

5.2.4 Outputs of Example 2

6. Conclusion

7. Appendixes

Appendix I  Socio-economic Data Preparation
I  Estimation of Operational Vehicle Fleet by DSD for 1996
II  Estimation of Jobs by DSD for 1996
III  Estimation of Average Income for 1981 and 1994 by DSDs

Appendix II  Survey Forms
Network Data
Link Characteristics SF106
Node Characteristics SF107

CTS Survey Forms
Interview Questionnaire (Goods Vehicles) SF66
Travel Counting Form SF67
Passenger Interview Questionnaire SF68

CUTS and CMR Survey Forms
Roadside Interview Questionnaire (Goods Vehicles) SF80
Manual Classified Counts SF81
Roadside Interview Questionnaire (Passenger Vehicles) SF82

Southern Highway Survey Forms
Manual Classified Counts SF95
Roadside Interview Questionnaire (Goods Vehicles) SF98
Roadside Interview Questionnaire (Passenger Vehicles) SF99
Appendix III  Conversion of Traffic Data
I  CUTS to CMR Conversion ....................................................... III - 1
II  S/H to CMR Conversion ....................................................... III - 1
III  Adjustment of Records........................................................... III - 2

Appendix IV  Data Conversion from Colombo Traffic Study (CTS) to the Format of Colombo Metropolitan Region Study (CMR)
I  Direction................................................................. IV - 1
II  Time Duration .......................................................... IV - 1
III  Origin and Destination ................................................ IV - 1
IV  Convert of CTS zone cording to CMR Format ................ IV - 2
V  Vehicle Types.............................................................. IV - 3
VI  Time Period ............................................................... IV - 3
VII  Occupancy ............................................................... IV - 5
VIII Purpose ................................................................. IV - 5
IX  Commodity Types ....................................................... IV - 6
X  Rejected Data ............................................................. IV - 6
XI  Software Used to Convert the Data............................. IV - 6

Appendix V  Entry / Exit Point Between Western Province and Other Provinces

Appendix VI  Trip Purpose Matrixes
Home Base Work Trips – 1996............................................. VI - 1
Home Base Other Trips – 1996........................................... VI - 2
Non-Home based Trips – 1996 .............................................. VI - 3

Appendix VII  Summary of Socio-economic Data and SPSS Program
SPSS Program ................................................................ VII - 1
Summary of Socio-economic Data ................................... VII - 7

Appendix VIII  Outputs of Models (year 1996 and 2010)
Home Base Work Trips – 1996.............................................. VIII - 1
Home Base Other Trips – 1996.................................VIII - 2
Non-Home based Trips – 1996.................................VIII - 3
Total Trip Generations – 1996.................................VIII - 4
Home Base Work Trips – 2010.................................VIII - 5
Home Base Other Trips – 2010.................................VIII - 6
Non-Home based Trips – 2010.................................VIII - 7
Total Trip Generations – 2010.................................VIII - 8
Increment of Trip Generation from 1996 to 2010.................................VIII - 9

Appendix IX Outputs of Example2
Home Base Work Trips – 2001 (Without Change of Jobs in Colombo DSD) ..........................................................IX - 1
Home Base Other Trips – 2001 (Without Change of Jobs in Colombo DSD) ..........................................................IX - 2
Non-Home Based Trips – 2001 (Without Change of Jobs in Colombo DSD) ..........................................................IX - 3
Total Trip Generations – 2001 (Without Change of Jobs in Colombo DSD) ..........................................................IX - 4
Home Base Work Trips After Reduce Job Opportunities at Fort Area and Added them to Battaramulla Area – 2001.................................IX - 5
Home Base Other Trips After Reduce Job Opportunities at Fort Area and Added them to Battaramulla Area – 2001.................................IX - 6
Non-Home based Trips Reduce Job Opportunities at Fort Area and Added them to Battaramulla Area – 2001.................................IX - 7
Total Trip Generations Reduce Job Opportunities at Fort Area and Added them to Battaramulla Area – 2001.................................IX - 8
Difference of Trip Generation from Due to the Job Opportunities changing from Fort To Battaramulla Area.................................IX - 9
