ENHANCEMENT OF THE SORPTION PROPERTIES OF FOAM RUBBER BY INCORPORATING A SUITABLE ADSORBENT

By

T. O. Kumanayaka

THIS THESIS WAS SUBMITTED TO THE DEPARTMENT OF CHEMICAL AND PROCESS ENGINEERING OF THE UNIVERSITY OF MORATUWA IN PARTIAL FULFILLMENT OF THE REQUIREMENT FOR THE DEGREE OF MASTER OF SCIENCE

DEPARTMENT OF CHEMICAL AND PROCESS ENGINEERING UNIVERSITY OF MORATUWA MORATUWA SRI LANKA

FEBRUARY 2007
DECLARATION

I certify that this thesis does not incorporate without acknowledgement any material previously submitted for a degree or diploma in any university and to the best of my knowledge and belief does not contain any material previously published, written or orally communicated by another person except where due reference is made in the text.

Supervisor
ACKNOWLEDGMENT

From the beginning I would like to offer my grateful thanks to Dr. Shantha Walpolage, Senior lecture, Department of chemical and Process Engineering, University of Moratuwa, for his kind and patience, supervision and excellent guidance during the entire course of this project.

My grateful thank also goes to Prof. Ajith de Alwis Head of the Chemical & Process Engineering Department, Dr Jagath Premachandra, Senior Lecturer and all other lectures of the Department of Chemical & Process Engineering, University of Moratuwa, who helped and encouraged me in various ways to complete this project successfully.

Then I'm very much thankful to the Wonderlight Consumer Products (Pvt.) Ltd. and Beco link (Pvt.) Ltd. for supplying raw materials for the project.

I wish to thank Mr. M.A Hemachandra, Miss. A.S. Wahalathamthri and Mr. M.G.S.K. De Silva and special thank goes to Mr. Janaka Madushanka for their support given me in various occasions during the project period.

I warmly remind my beloved parents and my husband Chamila Amaradiwakara for all the encouragement and the support given me as usual to success this project.

Finally I would like to thank my friends, especially Sashmial Dissanayaka, Poornima Jayasingha, Gayan Bandara & Chinthaka Narangoda who were with me and gave their kind co-operation through out this project.

CHAPTER 1: INTRODUCTION
1.1 Natural rubber latex foam 01
1.2 Uses of Latex foam 01
1.3 Filler incorporation to latex foam 02
1.4 Objectives of the research 03

CHAPTER 2: LITERATURE REVIEW
2.1 Polymer Latex 04
2.2 Natural Rubber latex 04
   2.2.1 Composition of field latex 04
   2.2.2 Preservation of natural rubber latex 05
   2.2.3 Concentration of natural rubber latex 06
2.3 Manufacture of natural rubber (NR latex foam) 07
   2.3.1 Manufacturing process of foam rubber 08
2.4 Foam Economies 20
2.5 Theoretical aspects of adsorption 21
   2.5.1 Factors affecting adsorption 21
   2.5.2 Adsorbents 22
2.6 Activated Carbon 22
   2.6.1 Manufacture of activated carbon 23
   2.6.2 Pore structure of activated carbon 25
   2.6.3 Activated carbon structure and surface chemistry 26
2.6.4 Application of activated carbon

2.7 Zeolite

2.7.1 Origin of zeolite

2.7.2 Structure of zeolite

2.7.3 Pore structure of zeolite

2.7.4 Applications of zeolite

2.8 Incorporation of adsorbent into natural rubber latex foam

2.9 Applications of modified NR foam

2.9.1 Applications in indoor air pollution

2.9.2 Steps to improve the indoor air quality

2.9.3 Modified NR foam applications in odour removing

2.9.4 Physical adsorption

CHAPTER 3: METHODOLOGY

3.1 Experimental design

3.2 Testing of adsorbents

3.2.1 Determination of pH

3.2.2 Determination of Avg. particle size

3.2.3 Determination of moisture content

3.3 Methods of dispersion preparation

3.3.1 Determination of the best preparation method

3.4 Preparation of adsorbent dispersion with maximum TSC.

3.4.1 Preparation of dispersion with varying TSC %

3.4.2 Determination of dispersion properties

3.5 Determination of the best dispersions for making a stable latex compound

3.5.1 Preparation of latex compound

3.5.2 Determination of the properties of the basic latex compound

3.5.3 Selection of the best adsorbent dispersion for making

   3.8.3 Determination of Acetone sorption capacity

CHAPTER 4: RESULTS AND DISCUSSION

4.1 Properties of selected adsorbents
4.2 Preparation of adsorbent dispersions
   4.2.1 Selection of the best preparation for zeolite powder
   4.2.2 Selection of the best preparation for activated powder
4.3 Preparations of adsorbent dispersions with maximum T.S.C
   4.3.1 Properties of dispersions with varying T.S.C. %
4.4 Incorporation of adsorbent dispersions to NR latex compound
   4.4.1 Properties of basic latex compound
   4.4.2 Effect of adsorbent dispersions for the stability of latex compound
4.5 Effect of dosage of adsorbent for preparing stable foam of NR latex
   4.5.1 Determination of stability of latex foam varying zeolite dosage at
       Partial foamed stage
   4.5.2 Chemical stability of latex compound with varying zeolite dosage
   4.5.3 Structure analysis of foam with varying zeolite dosage
4.6 Physical properties of foam samples produced by batch scale process
4.7 Measurement of sorption property of modified latex foam
  4.7.1 Ammonia gas sorption of foam with adsorbents 91
  4.7.2 Carbon dioxide sorption of foam with adsorbents 86
  4.7.3 Acetone sorption of foam with adsorbents 99

ABSTRACT

Natural rubber latex is a colloidal dispersion of cis 1,4-polyisoprene in an aqueous medium. Chemicals are added to NR latex mainly as dispersions, emulsions and solutions at the compounding stage of latex to enhance the processing characteristics and to achieve the desired properties of the final product. The addition of various chemicals into latex as one of the above method should be able to maintain the colloidal stability of the latex. The colloidal stability of the latex compound is governed by the particle size, physical nature, viscosity, pH and the stability of the dispersions.

In this study an attempt was made to enhance the sorption properties of NR latex foam by introducing a suitable adsorbent into the latex compound. There was an early attempt on incorporation of activated carbon into the natural rubber latex foam. From this investigation it was found instead of activated carbon zeolite mineral can be used as an adsorbent with minimizing the problems compared to activated carbon incorporation. Stable dispersion of 36 % zeolite can be prepared by mixing the zeolite with dispersing agent and water. The mechanical agitation in ten minutes is sufficient to prepare the zeolite dispersion with satisfying the basic requirements of a stable dispersion. According to the chemical and mechanical stability studies on the latex compound, it has revealed up to 8% (on dry weight) dosage of zeolite dispersion can be incorporated into latex compound without disturbing the fine, continuous cell structure of NR foam. The similar investigation was carried out with the activated carbon and compared with zeolite foam samples. Activated carbon dispersion prepared as 25 % stable dispersion and incorporated into NR foam up to 5% (on dry weight) dosage.

The results of the experiment reveals that NR latex foam with Zeolite has a significant sorption properties for ammonia and carbon dioxide gases compared to foam with activated carbon whereas organic matter sorption is higher in foams with Activated carbon adsorbent. This sorption property of foams with zeolite can be used to generate a pleasant indoor environment by reducing odour and pollutant gases.
